

# Simplified User's Guide

Thank you for downloading. Each website in this package comes with two (2) types of file formats ie. [HTML](#) and [XSP](#) extensions for your convenience. So, not only the Deamweaver or Microsoft FrontPage users will benefit from these websites but also the fast growing XSitePro users.

Please don't be intimidated by those "techi" words, we've tried our very best to hand you a turnkey website that you can launch literally in few minutes.

Files may vary depending on your acquired license, If you owned a MRR license of this product then you should have the following files after unzipping:

1. Website
2. XSitePro
3. WP Theme
4. eCover
5. MRR License
6. The PDF File
7. User's Guide

## I. Editing The Website:

If you are planning to sell the product that comes with this package then you should do these very important steps. Before you upload your website to your server make sure that you add your "[Payment Button](#)" on the order page so people can pay before downloading the product and the download page where buyers can download the product after the successful payment.

**There are 3 very important pages that you need to edit:**

1. Order Page – default file name ([OrderNow.html](#))
2. Thank You Page – default file name ([MyThanks.html](#)) *(Don't forget to rename this)*
3. Resource Page – default file name ([Resource.html](#))

## I.a Order Page

Depending on the merchant you are going to use, payment button setup may vary but I'm pretty sure that each of them has its own user's guide that you can follow. Let's assume that you will be using Paypal as your payment processor since it's the very popular and convenient to use both for sellers and buyers.

## I.b Thank You Page

Do not forget to edit your "**thank you page**" as well, by putting the download link of the product. You can also monetize your thank you page by putting some affiliate offers related to your niche.

## I.c Resource Page

Aside from this website's own unique product, it also comes with a resource page wherein your customers can browse Clickbank products as well. Your prospective customers might not like your product for some reasons, so, why not offer them products by others instead.

By default, we included a snippet from a third party service called [CBPro Ads](#) wherein they serves Top ***Clickbank's products with images related to this product in autopilot***, all you need is to register to their website for free to get your own tracking code. Creating an account with [CBPro Ads](#) is free but they do have paid options wherein you will benefit more as a user but of course it is not mandatory, you may upgrade your free account anytime. Open you own account here [CBPro Ads](#)

**Make sure that you change the default "Members ID" with your own Members ID to ensure that the sales will be credited to you.**

Using your html editor, change the view into "**code**" to change the existing code with your own code. If you are using FrontPage it is most likely on the bottom left of your screen.

You can also tweak the ad's appearance by changing various parameters such as width, font color, font style etc.

If somebody buys on the products displayed on your resource page you will get certain percentage somewhere around 50% to 75% of the product's total price depending on the product. Commissions are being handled by **Clickbank** not **CBProAds** please don't be confused of this thing.
