Introduction

Most peoples fail to see that they could be the next victim of fire, burglary, violence, etc. The fact is none of us is safe from fire, crime, carbon monoxide poison, etc. Health is a great example to use, which can help you see that no one is exceptional to the rules of life. No matter how healthy a person is, one day he will die, or fall ill.

The facts must hit you in the face before you can see that home security is important, since you could be the next victim. Nowadays, the world revolves around surviving. Each day a home is threatened by burglary, fire, carbon monoxide, terrorism, violence, crimes, etc. At any given moment, reality could make you the next victim.

In the face of danger, you must learn to follow rules. The rules state that if your home is in danger, the first thing you must do is dial 911. But, when do you dial 911. Where do you dial 911? We must find answers to those questions before we can follow the rules.

All day long, you will read information informing you about home security systems. Each article you read tells you what you get for the price, and how the system can help save your life. What authors do not tell you is that the world is filled with many issues, that not one single home security system can provide you the protection you'll need to survive.

What I'm going to tell you will help you decide on your home security system that benefits to, as well as steps you will need to take to protect your home, car, computer, etc.

In life, issues surround us each day, including racism and ethnic inequality. We survive in a world based on low morals, standards, etc. The standards nowadays

have forced people to reflect on what they see on television, or hear on radios. In society, we still struggle with sex discrimination around the world. Daily our children fight peer pressure, while we as adults fight peer pressure in other forms. Sports alone have put us in a competitive world, whereas it seems that everyone is striving to be better than the other is. We suffer from poverty, wage gaps, sexual harassment, and gender division in paid sectors, age discrimination, social inequality, death, health failure, and more.

In addition, we live in a world filled with violence, pornography, and deficiencies in parental rights, marital rights, Medicare discrimination, victimization, hate crimes, wars, drugs, alcoholism, etc. Each is issues causing problems, which is diminishing our survival. Due to the ongoing problems, we have higher crime rates, wars, etc. Moreover, guess what the roots add up to: money, power, and control!

We can discuss television alone to see that home security systems, no matter how advanced technology has come, it rarely is enough. One thing people tend to do is to ignore reality. Reality will always come back to slap them in the face however.

Did you know that the average criminal based person would study crime, forensic science, etc, to choose an alternate that will not get him/her caught? This means that criminals will also study home security systems to find a way to get past the device.

One of the largest crimes in the world is property crimes. The crime statistics do not surpass other types of crimes; however, property crime is one of the leading problems we face today. Property crime is defined when someone takes property or money from someone without force, and/or threatens to force/destroy their property.

Keep in mind that not all burglars are alike. Some burglars will only break into homes when they need cash to pay their debts. Other burglars will hack into computer systems to steal money. Still, other criminals will kill after breaking into homes and finding someone at the residence.

Property crime also stretches to larceny, vehicle theft, arson, theft, etc. When someone breaks into your home by force, this is called break and entering.

Moreover, many criminals will act out on impulses. Impulses are an urge we all share, yet some of us cannot control these urges. Many of the crimes committed today are done by occupational, white-collar people, corporate, celebrities, organized crimes, juveniles, etc. Contrary to beliefs, those of the poor minority are the lowest on the totem pole to commit such crimes. Therefore, you have a world full of people with different beliefs, influences, acts, etc.

We hope you can see that it takes you to put forth additional efforts to assist your home security system, smoke detector, and CO alarms. To learn what steps you can take to protect your home, consider your local library, fire department, or ultimately the Internet.

Basically, this is just an introduction to let you know about why home security is important on our daily living and in this ebook, I'll show you all you need to know and what type of home security, devices and accessories to make a perfect home security protection system for your home.

Chapter 1 - Why Need a Home Security System?

[\(Return to Contents\)](#)

Since the world's statistics of criminals is increasing, we all strive to feel safe in our home. Sometimes we would all enjoy vacationing without worrying if our home is safe. Let's face it we work too hard to earn our material belongings; therefore, the majority of us would enjoy uninterrupted security. According to statistics, homes are broken into each day, and most homes are violated while the family is on vacation, or away from their home. Most criminals rather get in and get out, rather than face potential risks, such as human encounters.

Since the statistics are increasing technology, designers are working hard each day to help us find the level of security we need. For this reason technology designers has invented home security systems, deadbolts, fire alarms, CO alarms (Carbon Monoxide Alarms), etc. In fact, today, you can have card operated door locks installed on your home. In other words, you use something similar to a credit card. Once you insert the card into your door lock, the system reads the digits on the card, and authorizes permission to enter the home. We see this common device at many hotels or related environments today. In fact, the United States Government uses similar alarms in various sectors.

By installing a home security system, this could significantly reduce the odds of your home being burglarized. Online you will find a wide selection of home security devices. The devices mainly offer you feature, such as push button call. In other words, you merely push a single button, which the system will kick in and call the police and/or fire department for you. If you have trouble getting around, the security system is not, a better choice. However, you may look online for remote controlled home security devices. The push buttons however do offer advantages, since a live voice will respond to the push of one button. You might check out Intercom Devices to learn more about such features.

Home security systems are easy to install nowadays. Since, you merely purchase the device and a company will send workers out to install, test, and prepare you to use your system. Ultimately, you can purchase wireless kits, which you can install on your own. Be sure to read the manual carefully to make sure the device is installed properly. Don't forget to test your system regularly, dust, and replace parts as needed.

The main thing you want to do when searching for home security is to find the right system for you. A variety of companies online offer systems that fit your lifestyle. In addition, the companies will help you choose the best system that fits your needs. The basic home security systems include motion sensors, photocells, sound detectors, window and door alarms, wireless systems, etc. The lights are great, since motion lights will typically scare away the average criminal.

Criminals that are more dramatic however may require extensive threats, such as the interior alarms, which monitor intruders inside the home.

The alarms have panic switches, motion sensors, noise detection, light beams, etc. Many alarms today include light beams, which if someone triggers the beam, it will automatically send out a photoelectric beam. You can also add pressure mats to your doorstep, which if someone steps on the mat, it would instantly alert you. You have the option of installing Perimeter Alarms as well. The alarms will send a warning, such as (Siren, or Bell alert) when someone steps on your doorstep. Burglars of all sorts would definitely take flight. Lastly, if you are searching for complete home security, check out the products online to help you compare.

Enforcing Home Security

[\(Return to Contents\)](#)

People neglect to believe that they could be the next victim of fire, burglary, violence, etc. Therefore, in this chapter we will briefly discuss crime statistics. The statistics are designed to help you see that any of us (at any time) could fall victim.

Crime Types include murder, violent crimes, rapes, robberies, aggravated assault, property crimes, grand auto theft, larceny, theft, etc. In small towns, the statistics are showing a rise in crimes, which some areas have an indexed crime rate at more than 345. This is a small town alone and based on 100,000 people count.

The estimated rapes in smaller towns can reach up to 12, which means more than 204.2 people are raped out of the 100,000 people count. The count for smaller towns is sometimes 3982.6. This reduces the count. Robberies are rated at seven per 119.1 in smaller towns. You will see that larceny and theft is increasing in many small towns, which the figures soar to 243. Now, imagine what figures would show in the statistics for larger areas?

Now that we brief small town statistics, let's consider home security, spy cameras, criminal attorneys, motion detectors, disaster recovery, self-defense, car alarms, crime rate comparison, etc.

Spy Cameras:

Spy cameras include security devices, spy cams, bug detectors, night scopes, and more. Spy cameras are ok, since the equipment will monitor your home and catch burglars in their action. Still, you will need smoke detectors, CO alarms, etc to protect your home. Spy cameras are costly, therefore I would inform those seeking home security to consider alarms that alert the police immediately when burglars, or prowlers come to your door.

Bug detectors of course can help keep bugs away, which are a good ideal, since people have suffered illnesses related to bug bites.

Home Security:

Home security includes the ADT models, Free ADT home security devices, Brink's, etc. Wireless home security alarm systems are also available. You can purchase contracts online, which means you pay monthly for home security systems. The contracts provide you free labor and parts.

When people enforce home security, it cuts back on crime, including burglary, rapes, murders, etc. In addition enforcing home security will cut back on home fires, office fires, etc: you will not hear reports of carbon monoxide deaths and injury as well when enforcing home security.

The world is moving toward disaster; therefore, you want to get prepared to save your family. Home security includes disaster recovery. When you set up your home plans to escape fire, burglary, carbon monoxide, etc, you should also set up a backup, or disaster recovery plan. The plans will help you get back on your feet quickly.

Additional home security tips:

Today, the world is revolving around chaos. Everyday a home is threatened by terrorism, violence, crimes, etc. The first thing you should do if your home is in jeopardy is call 911. If possible, ask the authorities what you need to do first to protect your family. (People tend to act out irrationally at times, for this reason document any conversations you have with the law) Make no exceptions, the law can be your best friend or worst enemy, therefore record all conversations you incur with authorities.

Home security could include pepper spray and/or Mace. However, you should check your area to make sure the law permits such protection. Sadly, some states have banished mace and pepper spray, which results in problems. People should have protection, yet the law is making it virtually impossible to protect. Therefore, check with the laws first.

Defining the Needs of Home Security

[\(Return to Contents\)](#)

No one can truly have home security until he/she defines what is needed to protect his or her home. Home security includes computers, phones, electricity, alarms, heat, and ventilation. Still, home security stretches further. In this article, we can discuss a few crimes. In addition, we can discuss how you can protect you, and your family from such occurrences.

Crimes include burglary, larceny, fire, theft, grand auto theft, identity theft, computer viruses, hackers, crackers, etc. Fires and carbon monoxide are crimes committed by negligence around the world, yet many criminals will start house fires in attempt to gain something. Sometimes the fire is started out of contempt, or retaliation. In addition, gang people will sometimes start fire to earn brownie points.

Defining home security will put you in front of crimes, accidents, and incidents. If you want to keep out burglars, your best bet is to add a home security system. The alarm will alert you when strange occurrences happen on your doorstep. You will need to purchase a system, which will give you the most protection. In addition, you will need to continue maintenance, tests, and cleaning. If alarms are dusty, it can cause the alarm to go off.

In addition to burglar alarms, you will need to install smoke detectors and CO alarms in your home. CO alarms will help you ward off carbon monoxide. You

should use your manual and follow instructions when installing your new alarms. In addition, you will need to continue maintenance, tests, and cleaning. You can purchase alarms nowadays that have remote controls, which will make it easy for you to test the devices weekly.

To augment your CO and smoke alarms, as well as the burglar alarm you want to make sure your home is ventilated. In addition, make sure all appliances, such as stoves and furnaces are working properly. To add to your burglar system makes sure that your door and window locks work properly. Add a deadbolt to your entry doors, and put up sensor lights outside of your home. The lights will automatically click on when someone steps on your doorstep. In addition, add outside lighting to help keep away prowlers.

Next, you want to write a floor plan. The floor plan should be a drawing of every room in your home. Make sure that you outline two ways to escape all rooms in your home. You can practice drills to keep the family prepared.

Once you have secured your home you want to secure your computer, especially if you have Internet access. Securing your computer will help you escape Identity theft, as well as other crimes. Predators swarm the Internet, searching for prey all the time. Therefore, teach your children to stay out of areas online that could open the door to risks. The chatroom, bulletin boards, etc, are some of the areas predators roam.

You want to install quality virus programs onto your system as well. The viruses nowadays have cost billions of dollars for recovery.

McAfee, Norton, Pc-cillin, etc, are some of the most recommended virus programs available. In addition, you want to install programs to help you avoid hackers, crackers, etc. You should also keep maintenance on your computer to avoid leaks into your system.

Finally, you want to make sure that your phone is secure. Your phone should be working at all times in the event you need to call 911. Tell your children to, never give out your phone number to anyone that you do not authorize. To learn more about home security, conduct research to help your family stay safe.

The Importance of Home Security System

[\(Return to Contents\)](#)

Home security is important in the hasty world we live. To adhere to home security you must consider rules and follow them precisely. To help you learn more about home security we can discuss helpful tips.

Fire:

Fire is one of the leading causes of home destruction. Since fires are dangerous, you can increase home security by learning how fires are started and what you can do to prevent fires from occurring. It is important that you teach your children to never, play with fire. Matches, lighters, etc, are grown up tools. The tools are not toys. You should teach your children to tell adults when they see someone playing with lighters or matches.

Home security includes dialing 911 when emergencies arise. Everyone in your household should know that it is ok to ask for help. If an emergency is noted, your household members should be informed to call emergency hotlines right away.

Tip: If your home is on fire, get out if possible and call 911 from your neighbor's home.

Plans:

Some of the best-laid plans can lead to failure, yet each household should have a floor plan, which directs each member how to escape the home if a fire should occur. The first thing you should do is draw a plan on paper to illustrate the steps to take. You will need to find a spot outside of the home, which you are to instruct the family to meet in the event a fire occurs. In addition, the plans should be placed in your home area where the entire fire will see it. Practice is the process of doing well. It is recommended that you practice fire drills regularly to prepare for the worst.

Now that you have your plans laid out, you can make up a checklist.

Let's begin:

Do you have fire alarms properly installed in your home? Are the alarms installed in various areas, especially if you have a two-story home? Are the batteries fresh, or should you replace them? Do your electrical outlets have more than two cords plugged into the circuit? Are the cords secure, or do the cords present hazards? Make a point to restore old cords, and renew the cords often when damage is present. Do you keep your lighters and matches in a safe area away from children?

Electrical outlets should only supply energy to two cords and no more. In addition, you should unplug particular appliances when unused, such as irons.

Fireplaces can cause hazard. You should have screens and doors on the fireplace to avoid hazards.

To avoid fires you want to make sure that space heaters are keep away from furniture, walls, drapes, or objects that could catch fire.

In addition, you should never burn candles unaccompanied by an adult.

Cooking:

Always turn pot handles away from areas where a touch could knock it over. As well, avoid the handles from touching fires.

Clothes:

If fire occurs in your home and your clothes catch fire, stop, remain calm, and do not run. Instead, drop quickly to the floor, and roll. Cover your facial area and then roll over, over, and over until the fire ceases.

Fire Alarms:

Each month the fire alarms should be tested. If new batteries are needed, replace them immediately. If you do not have a fire alarm in your home, visit your local fire station. Many fire stations will supply free fire alarms.

Carbon Monoxide is as dangerous as fire, therefore considering a Co-Alarm could provide you extra home security.

Chapter 2 – How to Safeguard Your Home & Stay Safe

[\(Return to Contents\)](#)

Keeping your home safe in Home Security

We would all like a peace of mind knowing that our homes are safe when leaving or on vacation. Unfortunately, the greatest number of breaking and entering occurs when families are on vacation or away for longer periods. By installing a home security system, this dramatically reduces the chance of your home being burglarized. In addition, a home security system has other features such as options for calling your local fire or police department by pushing one button. Elderly or small children in the household would benefit from this feature, as a live person would be available in any state of emergency without using the phone.

Home Security Systems may sound like a lot of work, especially when most families are constantly on the go. The key; is to find the right system for you. Many Home Security companies offer choices that better fit your lifestyle and can choose what is most convenient for your household.

Here are the basic choices to choose from...

Simple Security; These options have less bells and whistles. The system may include motion sensors, sound detectors, and photocells. Individual window alarms could be set in place, do-it-yourself wireless systems, and timers that would turn on lights at a programmed time to create an illusion that someone is home.

Other options with the Simple Security would include; Interior alarms that monitor intrusions inside the home including, panic switches, noise detection, motion sensors, photoelectric beams (light beams that trigger when interrupted) and pressure mats (flat switches that trigger by footsteps). In addition to home security systems, adding dead bolts, “heavy-duty strike plates,” can help you

secure your home. Outdoor motion detectors are sensor lights that also offer assistance in home security.

The last option would be a Perimeter Alarms, where any perimeter being violated will ring a bell, or siren scaring most burglars away.

When it comes to the security and safety of your property and family, there is never an exact cost to help consider which system, but always know that there is a solution for keeping your home safe from violators. Anything new takes a short time to adjust, and before long, it becomes systematic in your everyday living.

I too have a security system and I never think of it as a burden to punch in my code when I enter my home with my children, or any thought at all for that matter. I guess that is what we call that little peace of mind. My home security gives me the comfort I need just knowing that my family is safer.

Let's face it, we live in a world moving toward increasing crime. When we think of people out in the world who have suffered fatality, or injury related to burglar, we often think, "This could never happen to me." The fact is it can happen to you. It just hasn't happen yet.

The fact is no one is excluded from criminals' notion to steal, harm, or take a life. Criminals do not think on the same terms as we do, therefore, we must take extra precautions to guard our family and home.

In addition to burglary, fires and carbon monoxide claims a life each day. According to statistics over 1000 person's die from carbon monoxide poisoning. Another 10,000 fall injury to carbon monoxide and/or fire. Fires claim more lives than carbon monoxide, therefore adding a CO, (Carbon Monoxide Alarm) Smoke alarm, and a home security device to your home is not much to ask for compared to the lives you will save.

Saving Face in Home Security

[\(Return to Contents\)](#)

Being protected is important to a family's home. Burglary is common in the United States where people are highly victims everyday. Today technology is creating devices such as ADT brink systems. Additional technology advanced systems is available, which it pays to install a system in your home. Experiences in robbery are known around the world, which people get away with this kind of behavior. It could be you.

Tips and advice: security can save a life, which could be keys for you to a safer future. If you are leaving your home, always make sure your doors are locked; windows etc... and get Crime Watch put on your door so neighbors can keep the eye on your area.

Also, remember if you are in the house and someone breaks in, violence is always the last resort. Call 911 for your phone set immediately. Don't forget to stay calm and if you don't have a house phone you should get one or otherwise get family plan cell phone just in case the kids are home alone. NOTE: All laws state that if someone breaks in your home, has the intent to cause great bodily harm, and has a weapon, you have the right to protect your self. If you cannot prove break in, intent, and that the perpetrator has a weapon and you cause harm and/or death, you may face penalties.

Sometime it's too late for 911. If a perpetrator breaks in your home, with intent, and has a weapon, you can protect yourself, however, if you do not kill the perpetrator, you may face penalty as well. IT is your word against the perpetrators. Check your state laws, since the laws change rapidly.

You should get ADT brinks system or some other device installed in your home because when criminal activity occurs, your system could go off and the cops will

come quicker. In addition, the criminals most likely will run. Eventually they will be captured if more people adhere to safety rules.

Thieves usually are after jewelry or money, so buy a safe or a vault. It would be harder to find if your belongings are stashed, and by the time, it is found they need to break the combination or lock. Carrying the safe or vault out is likely to be seen which some one will call the police.

Another way to protect your home is to have a silent alarm. While they are busy taking from your home, the cops will be on their way. While the criminals are running out, cops are surrounding the house, which means the criminals are likely to go to jail. In addition, the cops will probably be at your home before you get out of the house.

Camera vision is great, yet anything is possible. It is wise to have multiple cameras so when you set them up, set one for the outside and one inside. You could have an alarm on the camera so it will face you, then it will be loud, and draw attention to any and everybody around.

Thinking ahead is smart. If you are away from your home, ask neighbors, family, or friends to keep an eye on your place. Inform the watchers to dial 911 in the event strange actions occur around your home. Think sensibly and logically. Criminals tend to think they are slick. If they feel you don't care, neither will they care. The ultimate rule of thumb is to think like a criminal. If you want to protect your home, set up a safeguard that defends against criminal activity and you will save face.

Saving Money with Home Security

[\(Return to Contents\)](#)

You can save money by enforcing home security in many ways. For instance, installing a fire alarm in your home could save you thousands of dollars in the future. The first thing you want to do when considering home security is to decide how much security you need.

Do you live in a rough neighborhood? Is your neighborhood secure with Neighborhood Watch programs? Do the police respond to 911 immediately? Do you know how many predators are in your neighborhood?

Sex offenders are increasing. To learn how many predators is in your neighborhood visit the Sex Offender Register online. You want to protect your children outside of your home as well.

If you live in a rough neighborhood, you may want to consider home security systems. You can purchase intercom systems, home security systems, and more online. Online you will find bargains on a variety of products.

How to decide home security systems:

When you consider home security systems, you want to consider the source. Does the company offer you competitive pricing and savings? Do the home security systems have a good reputation and do the systems offer quality? Are the home security systems updated, and created by state-of-the-art technology solutions? Will the home security system provide you 24/7 home security through a monitoring device? Does the system have cast iron locks in the rate of monitoring? Is there a lifetime warranty that guarantees to replace parts in the event damage occurs due to faulty manufacturing? Can you get discounts with the home security system if you have insurance? Will the system give you and your family the peace of mind they deserve?

When you consider home security systems, you want to forget generics and think of complete security. Buying an inexpensive system may not protect your family. Still, you want to find home security systems that will save you money, as well as provide you and your family comprehensive protection.

What about CO-Alarms:

Do you know how much carbon monoxide is spreading in your home? Has your home been tested for carbon monoxide? If you think you are safe, then consider the following information.

Each year during the winter months, stories go live in the media, news orgs, etc. The news tell use that consumers give way to CO. (Carbon Monoxide) Carbon monoxide is a odorless, colorless, and poisonous gas, which leaks out through thousands of home and is often undetected.

The estimated death count due to carbon monoxide exposure is more than 200 annually, while experts treat ten thousands of patients for carbon monoxide exposure. The deaths and treated patients did not have CO-Alarms in their home to detect carbon monoxide.

Now, let me ask you again, do you know how much carbon monoxide is spreading in your home? Has your home been tested for carbon monoxide?

Recommended Carbon Monoxide Protection:

You should install a CO-Alarm inside your home, which should be installed away from the areas your family sleeps. The alarms should not be placed near areas where gas burns, such as stoves. Keep the alarms around ten feet away from all gas burning appliances? Once you install your CO-Alarm be sure to test the system regularly, as well replace the batteries annually. DO not put cheap batteries in the system.

In the event your alarm sounds off, be sure to press the “Reset and Silence Button”. Immediately call emergency numbers, such as 911, as well take your family outside where they can breathe fresh air. Count each head in your home to make sure everyone is safely out of the home. You should not re-enter the home until emergency experts test, and decide what is needed to fix the problem.

Channeling into Home Security

[\(Return to Contents\)](#)

When you consider home security, you probably channel into home devices. The fact is home security extends further. We can consider a few devices, yet we must also see that home security steps outside of your door. What about your vehicle, do you have security? Does your computer have security? What about your doorstep, is it secure?

Doorsteps:

You can add door alarms, driveway alarms, chimes, sensor lights, etc, to add security to your home. The home security solutions are reasonable cost, giving you cost effective products in saving your home. Still, what area you live in? Does it snow in your area during winter months? If so, did you take the time to add salt outside your doorstep? Did you know keeping ice off your doorstep could prevent falls?

Your vehicle:

What about your vehicle, do you have security? Did you know that grand theft auto is common? In fact in 2004 statistics showed that a vehicle was taken unlawfully in each 25 seconds of a day. Did you know that the grand auto theft costs vehicle owners, as well as insurance companies billions of dollars every year? For a few hundred dollars, you can install vehicle security, which will lower your insurance premiums, as well as the risks of loss.

Your computer:

Do you know how many people suffer loss due to computer viruses? Did you know that hackers break into computers every day? Did you know that hackers send viruses to damage your computer? Did you know that child molesters violate children every day by luring them into their web? To protect your computer you should install, and use often a quality antivirus program.

In addition, Microsoft offers Patches, which help you to keep away hackers, crackers, and viruses. The patches are free at Microsoft's website.

E-mails:

E-mails can be dangerous. It is important that you teach your children to allow you to monitor their e-mail activities. Let them know that you are not violating their privacy, rather protecting your interest. In addition, read all e-mails carefully, especially those with attachments. Predators send attachments in Microsoft's, McAfee's, or respectable company names to lure you into downloading harmful viruses. It is important also that you monitor closely any downloads, or installations.

Firewalls:

Firewalls are designed to help you keep out unwarranted viruses and hackers. Install a useful (NON-Third Party Software) onto your hard drive. (HD) You have a FREE firewall available you with your Windows program. We can show you how to use this feature in a few minutes. If you are installing hardware onto your computer, take care to use your firewall.

Backup:

Backup is a safeguard, which protects your information and home. Always backup copies of important information you wish to preserve.

Security: Passwords: Encryptions

As recommended, you should use passwords that include letters and alphabet. The combination should be lengthy. As well, you should change her passport every six months, or less depending on your computer usage. Never give out your password to anyone. Try to remember your password, rather than write it down. If you can't remember, write it down and store it in an area where no one can find it. You should also install, and make good use of encryptions, as well as Access Controls.

How to use Window's Home/Office Addition Firewall:

Go to start out at the bottom of your window screen at the left: Search for Control Panel and click on it. Search for the Windows Firewall Icon in the Window and click. Open the dialog box and make sure the box (ON) is clicked. There should be a checkmark in the box.

Securing your Home Computer from Attacks

[\(Return to Contents\)](#)

Many of us have basic common sense when it comes to safety. For instance, we don't open the door for strangers, or allow them to come in the house for that matter, or even answer a phone call if the number is not recognizable on the caller ID. So why do many of us have such a trusting nature when it comes to our computers? Unfortunately, there are many things hidden in the cyber space world that you are not aware of. One of them is called intruders.

Online, each day intruders are violating users' right to privacy by preying and seeking out credit card numbers and bank account information in hopes of stealing your identity for the purpose of purchasing goods and services. Bottom line, they want what you have stored on your hard drive. And it just isn't the money their after. Hard disk space, a fast processor, and an Internet connection are what intruders hope to gain in an effort to use your property to escape the

law. To help you avoid intrusion we will consider nine steps you can take to protect your property.

Below are nine steps to better, secure your home computer...

1. Users should install anti-virus programs to ward off Worms, Trojans, Viruses, etc. In addition, users should download free patches from Microsoft's website to protect your identity and computer.
2. Users should also use care when opening e-mails, since some have harmful attachments. Users should also backup important information, and install firewall programs to ward off hackers, crackers, intruders, etc. NOTE: Windows has its own integrated firewall, which users should set to on at all times.
3. Users are advised to employ strong passwords, as well as distinct passwords. It is recommended that you take caution when installing and/or downloading any programs to your hard drive.
4. Users should install, and make use of installations, such as file encryptions, access controls, passwords, etc.
5. It is a fact that the more computers intruder uses, the more difficult it is for law enforcement to trace activities. Since the law cannot track intruders and stop them in their trail, they can't be prosecuted. There is a reason intruder's pay attention to home computers.
6. Home computers are more vulnerable, especially when users do not implement the steps above to be better protected.
7. Anytime your computers are connected to the Internet through dial-in connections, and/or high-speed modems, you are a direct target.

8. To avoid becoming the next victim, you must adhere to the rules. Installation of an anti-virus program is the single most important thing to do first after setting up a new computer and logging onto the internet. Virus Scanners will search for particular patterns that match profiles of virus signatures. A virus signature is a string of bits, or the binary patterns, invented of a virus.
9. Virus scanners work in the same way as fingerprinting. That is the virus scanners fingerprint and detect information to identify potential risks. Virus Scanners, once it detects potential risks will immediately act by responding, removing, and destroying bad files.

By following the first step above means that you are off to a good start, but make sure that the following nine steps are taken for added safety. Most of the time we are trustful people and we never think this would happen to us. We would all like privacy, but in this day and age, privacy has become almost extinct. If you are prepared for home security, also consider to secure your home computer to avoid problems.

Tip: Preparing and practicing can help you avoid problems.

Chapter 3 - Finding the Right Home Security System

[\(Return to Contents\)](#)

Finding home security depends on you, where you live, and what you expect. If you want ultimate home security, you can max out by taking extra precautions, as well as installing proper security systems. Realize that life does not promise us total security; therefore, you want to focus on max security that the nature will allow. To discover your max security we can consider the area you live.

- What type of neighborhood do you live in?
- Do you live in a high crime area?
- Is your area regulated properly by the law?
- Do you feel safe in your neighborhood?

Knowing what type of neighborhood you live in can help you make a good decision. If you live in a drug trafficking neighborhood, you want to add quality-home security systems to your home. The world is populated with gangs, drugs, crime, sex offenders, etc. Therefore, think...It is no such thing as too much security. Home security systems are available online.

How can I choose the right security system?

First, you must realize there are a variety of home security systems available. You can research the market to decide which type of system you may prefer. The types of home security systems include warning signs and decals, remote monitoring, wireless security, smoke and fire detectors, CO Alarms, video surveillance, voice dialers, security cameras, security alarm system, environmental sensors, dummy cameras, driveway alarms, voice intercoms, sirens and strobe lights, etc. You will find a wide array of products online, including Pepper Spray and Mace.

Caution:

Some states have unfortunately outlawed **Mace and Pepper Spray**.

How can I learn what the security devices can do to secure my home?

You can go online to learn more about the products available. In addition, I can give you a bit of details on a few items. Dummy cameras only make prowlers think that a real camera is watching them. This works in some areas, however if you are in a high crime based area, dummy cameras will not convince intense and experienced criminals.

Video surveillance equipment is helpful, since the equipment monitors your home, office, etc. The video equipment includes Micro Eye systems. The videos capture prowlers and mechanically records quick actions by photographing the prowler. You can replay the video in live motion. This is great home security solution, however it will not provide you max security. You could consider video surveillance coupled with alarm systems. The alarms tend to scare prowlers more so than cameras.

Note: Never purchase home security systems where the devices are wired outside of your home. While many people do this, expert criminals are pros at disengaging the products, to complete their mission.

Siren and strobe lights are handy security devices. Anytime you shine light down on criminals or cause loud disturbances, most criminals will take flight. Of course, you want to complete your home security sound and light system with quality home security systems. You can purchase Sirens for as low as \$17.50, thus this leads me to believe that you will need compliments to get max home security.

TIP: Sensor lights are ideal home security compliments. You can add sensor lights to your porch, or areas of entrance. The lights automatically come on when someone is on your property. Add a sound alarm to supply you and your family max security.

Home Security Audit System

[\(Return to Contents\)](#)

To help you achieve home security the security company you chose will audit your home to see where you lack security. The first thing they can do is draw an outline of every room in your home. Take a walk around to familiarize again your home. Look in each room and decide two escape routes you can use in the event of danger.

When you begin to investigate your home, ensure that you consider home security to the level you deserve:

- Do your doors and Windows have security locks?
- Do you have deadbolts on your door?
- Do the deadbolts include heavy-duty strike plates?
- Can you easily unlock for Windows indoors from the inside with our problem?

You want to make sure that this is possible, since in the event a fire occurs you want to make sure you have a way out quick.

CO Alarm:

Quickly go through your living room, dining room, and family areas. Do you have a CO alarm (Carbon monoxide alarm) installed properly in each room?

Next, review your electrical outlets to make sure that it is safe. Do have more than two electrical units plugged into your outlets? If so, you'll need to purchase surge detectors, or proper equipment that will handle more than two electrical units. You should never plug in more than two units into one wall outlet. In addition, if you are not using your wall outlets do have safety plugs inserted into the outlets? If not, purchase them cheap now and act. In addition, make sure that your wall outlets do not have potential risks, which can cause fire.

TIP: Purchase surge detectors to handle computer equipment, audio, and video equipment:

- Do you have small children in your home? If so, are they safe from dangling cords, especially near Windows?
- You will also need to keep climbing objects, such as furniture. Small children tend to climb. If your window is open, or your child is curious and unlocks the window, your child may be in danger.
- Are your electrical cords out of the way so that no one trips or fall?
- What about your area lamps: Are the lamps programmable?
- Do the lamps have timers set to turnoff in on when you're not in the area?

Kitchen:

- Moving onto the kitchen, do you have an updated smoke alarm installed properly?
- Does the alarm have a silence button?
- What about a fire extinguisher, do you have one? If so, have you checked the fire extinguisher to make sure it is pressured?
- Review the area where you store cleaning agents. Do you have locks on them to keep your children and pets out?
- Do you have "ground-fault circuit interrupters" fitted into your electrical outlets?
- Do your gas appliances, if applicable have shutoff valves?
- Do you have short electric cords attached to your appliances?
- Do you have a vent and/or hood to cover your gas range? If not you will need one, since the stove will build up grease, which could put your home at risk. Is your sink areas free of electrical cords, which could lead to electrocution?
- What about your floors, Are there nails, tacks, etc, sticking up in the area?

- Do you have fitted rugs that will not cause your family member to fall, or trip?

Review your refrigerator:

- What is attached to the door of your refrigerator?
- Do you have a list of emergency numbers?
- Do you have your emergency escape plan posted? If not, then you are lacking home security.

In summary, you will need to check every room in your house and consider each detail of safety to have the home security you deserve.

Home Security Checklist

[\(Return to Contents\)](#)

If you have smoke alarms, CO alarms (Carbon Monoxide alarms), and home security installed in your home, you are off to a great start. Still, once you have your equipment installed properly you must adhere to maintenance and cleaning regularly. If you do not have home security equipment installed in your home, go online to learn more about systems, smoke alarms, CO alarms, etc.

Now that we covered the basics, we want to help your children. Ask your children to walk around the home and point out at least one smoke detector on every floor. Make sure your children understand that the alarms are to protect your home, and are not toys. Help them to familiarize themselves with the sound. Now ask yourself if you have replaced the batteries to make sure, the alarm is working properly.

Familiarize your children with alarms and letting them know the intentions of the alarms can help save your family.

Now continue your own checklist. You have a fireplace. Does your fireplace have screens and proper ventilation? If not, you will need to consider alternatives to increase your home security. Alarms will only protect you if you take the steps to support the alarms.

Check your electrical outlets:

Do you have more than two cords plugged into the circuit? If so, you are putting your family at risk. IF the outlets are unused, do you use safety plugs to protect your children? What about sink areas...do you have ground-fault circuit, whereas it will cut off automatically when unused? Did you take care to avoid plugging cords in around the sink area? What about your electrical cords, do they work properly?

Do your children know that matches and lighters are fire hazards? Do they know that matches and lighters are only designed for adults? Finally, are your matches and lighters placed in a safe area out of children's reach?

Do you own guns? If so, are the guns locked in a container where your children cannot touch them? Are knives carefully placed out of reach from your children, or burglars entering your home?

Do you use space heaters to warm your home in the winter days? If so, did you take care to store them away from objects that could cause fire? (Drapes, bedding, walls, furnisher, etc) Do you unplug your iron when you are not using it?

Do you burn candles, incense, etc? If so, do you make sure an adult is always present. Do you avoid smoking in bed?

Does your gas range have a cover over it when unused to avoid grease build up? Do you have shutoff valves on your gas range?

NOTE: A woman allowing her 6-month old child roam around the house in his stroller was unaware that the child had turned the knob on her gas oven. Later that evening the woman prepared to cook dinner turned on the gas range, and BAM! She was caught fire, her hair burning; eyebrows scorched, hands burnt, etc, and if another adult had not been in the home to put out the fire...the family would have died! This is a true story, which does not need repeating. Stay safe!

Each month you should check your smoke alarms to make sure they are working properly. In addition, you should also keep the alarms clean. Upgrading your smoke alarms is recommended each decade. You should also check your CO alarms to make sure they are working properly. Again, perform maintenance and cleaning regularly.

Finally, do your children know how to avoid panicky in dangerous situations?

Facts in Home Security

[\(Return to Contents\)](#)

Somewhere around the world, each day families are escaping home fires. Out of the thousands of people most are killed or injured, which many are children. The reason that these people endure such tragedies is because they lack informative information to prepare them for such situations. Many homes do not have fire alarms. Yet, many homes have fire alarms but fail to upkeep the alarms, making sure they are working properly. In fact, statistics show that millions of smoke alarms installed in homes and offices are outdated.

Tip: It is important to make sure that your smoke alarms are working properly. You should test the alarms each week, and replace the batteries when needed. If the smoke alarm is outdated, purchase a new one. Smoke alarms are cheap. In fact, you can visit your local Fire Station, since many firefighters offer free smoke alarms to the public.

Each year hundreds of children die from fire-related injuries. The reason these children die is because they were not informed, or else the alarms did not operate properly. Sadly each week around 17 children die, and the statistics are rising. In fact, every 30 seconds the figure of home fires double.

Tip: If your home catches fire, it is important that you use your plans. If you did not create plans, do so now. The plans will instruct your family to group in one area and escape the home in less than five minutes.

Hint: Replacing your batteries and smoke alarm regularly can prevent fire.

According to statistics, the average fire starts during sleep hours. This puts the family at higher risk, therefore plan, prepare, and maintain your smoke alarms. According to fire experts if you maintain your smoke detectors your chance of survival doubles. If you are not sure how old your smoke detector is buy a new one immediately. Don't take chances!

Where to install your smoke alarm:

If you have a two-story home, you should install smoke alarms in upstairs and downstairs bedrooms, hallway, kitchen, living room, and finished basement. Single floor alarms should be installed in bedrooms, kitchen, living room, and dining room. You want to purchase smoke alarms that meet NFPA recommendations. In addition, purchase the high quality protection devices with silent features. Apartment alarms should be installed in bedrooms, kitchen, dining room, and living rooms. In fact, NFPA suggests that families install fire alarms on each floor level.

How to choose power source alarms:

In all, there are three types of fire alarms. Some alarms are powered by batteries and are most recommended. The battery alarms are easiest to install. The 120V

AC batteries are hardwired, which wires to other electrical units. This smoke detector must meet qualified electrician standards. If you plan to purchase this type of alarm, pay a professional to install. The combination alarms are also hardwired, which require batter backup. The alarm is designed to work when power is out.

How to choose features:

Smoke alarms all have test buttons. The button enables you to test the alarm for proper functioning. You should use these buttons weekly. You can also purchase alarms that work with your standard remote controls. The smoke alarms do not require remote programming, which makes it easy to test your alarm. Additional alarms include the combos. The alarms are programmable, which uses voice to alert you when CO or smoke is detected. (CO-Carbon Monoxide) This particular features protects you in two ways, therefore it is one of the highly recommended devices.

Chapter 4 - Taking Action in Home Security

[\(Return to Contents\)](#)

When you take action to protect your home, your family will have the security they need to survive such harsh worldly conditions. Taking action means to set up alarms, as well as securing your doors, windows, etc. The more security you supply to your home, the better chance you will have. Currently every 30 seconds someone dies in fires. In addition, someone's home is robbed at the same time a fire claims a life. While there is no such thing as complete home security, there are measures you can take to protect your home.

Alarms:

Alarms include smoke detectors and carbon monoxide alarms, commonly referred to as CO-alarms. The CO-alarms and smoke detectors combined could bring you security. You can also purchase combined smoke and carbon alarms to save money. The units alert you when smoke and/or carbon monoxide is putting you at risk.

Fires:

If your home catches on fire you should have prepared ahead of time to get your family to safety. Do your kids know what to do if their clothing catches fire? Do they know to cover their face, drop, and roll until the fire is out? You can prevent fires however by adding updated fire alarms, smoke detectors, and carbon monoxide alarms to your home. Check the devices weekly and restore the batteries when necessary. If you install updated fire, smoke, or CO-alarms it is important that you repeatedly remind your family what to do in the event the systems sound.

The children should be taught to avoid hiding from the fire. Rather the children should have a safety plan, which instructs them to safety. Practicing safety plans weekly can help your children prepare. Since heat rises, the children should be

instructed to drop to the floor and stay low to the ground while working their way out of the home.

The children should be informed to avoid stopping for pickups, such as favorite items. Safety first means forget materials and get out of the home. Once the family is outside of the home on safe grounds, it is important that you inform your family to meet in the same place. Do a head count to make sure everyone is out of the home safely?

Carbon Monoxide:

If you have a CO-alarm setup in your home, teach your children what to do just as you would instruct them to do with smoke alarms. Setup the same plan that you would set for home fires. If carbon monoxide leaks into your home, it is important to call 911 now, and get out of the house. Stay in the air until the emergency team arrives, and do not go back into the home until you have been properly instructed by the emergency team.

Burglars:

Burglary is common. More common than most people realize. Burglars tend to focus on robbing homes, yet some will kill if provoked. You should set up a home security system, such as Brinks or other products.

The alarms will alert the police in the event someone breaks in your home. DO NOT fight burglars if confronted. You should submissively follow the burglar(s) instruction to avoid injury and/or death. Disobeying this rule is one of the leading reasons people die during robbery. If you install a burglary system, you will have security. You should put sensor lights outside your home to ward off prowlers. The sensor lights kick on when someone enters your property. The lights are low cost and worth the effort of installing.

Making the right choice in Home Security

[\(Return to Contents\)](#)

Making the right choice in home security is important in these days and ages. Today, the world is filled with crimes. Few of the crimes we face today, include burglary. Burglary is often acted out on by people around us, such as teenagers, or people we know. In today's crime-based world, there is no such thing as complete security, yet technology is working hard to deliver the high-quality security we all deserve.

The devices that technology has advanced today include the DIY systems, which are burglar alarms and kits. The kits provide panel control units, which gives you the option to select modes. The control panel, units are powered on hardwire zones, which can give you more than 30 complete options over wireless or hardwire. Units today supply user codes, which add security over an initiated phone/paging device. LCD Keypads make room for programmable chimes, on a plug-n transforming device. Backup batteries, superb wattage, and easy installation just add to the luxury of the latest home security devices.

The ready kits make it virtually easy to install the units. In addition, you have easy access to adding home security accessories to your unit. The manuals will let you know which units integrate with your kit. Since you have easy installation, and accessory capabilities, you also gain reliability and performance. Few units available enable you to add additional hardwire zones, or you can add wireless receivers to the kit.

Currently power kits are on sale. You can find alarm kits for as low as \$139. Of course, other deals are available, yet it depends on what you want.

Vista kits are available as well. The hardwire zones work from an 8-board unit, which provides you the ability to expand to more than 45 zones. You can mix the kit with wireless module expansions, or hardwire. Vista works from control panels,

which include metal inclusions, including locks. The units provide you thousands of alpha mega keypad accessibility on a thousand-capability touch screen keypad. Infrared technology motion detectors will help you to guard your home. In addition, you receive Wave Tone Sirens, which work from battery and performs from transformers.

Wireless kits include alarm panels, which provide six zones on a 32 wireless platform. The units enable you to type in more than 35 user codes while using initiated pagers. The security units include LCD-based keypads, which include wireless receivers. You can program door chimes to any tone you choose. In addition, you receive digital immune capabilities to protect your pet. Furthermore, you receive transformer, backup battery, jack, cord, mounting kit, and so on. Sirens are included with some kits.

For less than \$100 you can own the Rokonet system, which provides you an orbit control panel, six LED Zone keypad, Motion detectors, siren, transformer, battery, full 6 programmable zone control, etc.

Various units online include panic input zones, emergency zones, which is handled on keypads, etc. The zones key into fire, panic, and set emergencies. You may receive LED and LCD combined keypads, which work with event logs, user codes, duress codes, etc. The units may supply digital communicators, alongside voice messages, and phone number programmable capabilities.

If you are not bothered by voices, online you will find Voice Talking kits. The kits include hardwire expander capabilities. Graphic keypads are supported on dual wire smoke alarms, which enable you to schedule user options. User codes, control panel, talking keypad, sensors, transformer, cam lock, battery, motion detector, etc, are all included in few kits. You will also receive the wireless receiver or have the capability to adding it to your kit.

Creating Sound Home Security

[\(Return to Contents\)](#)

Creating sound home security is never easy in this fast-paced world. Considering home security is important. When you consider home security the first thing you must consider is how much living area you have to deal with. In addition, you must consider what you are doing currently to keep your living quarters safe. In addition, to maintain home security one must consider the home security system installed, etc.

Homeowners should always use common sense when considering security. For instance, most people are aware that locking their doors and windows each time they leave can protect their home. In addition, those leaving their home are responsible to, not give their keys to anyone, especially someone they do not know. Additionally, when a person goes on vacation, common sense tells them to alert neighbors, friends, or family and ask them to watch your home. You should also have home security systems installed in your home, since vacationers are the highest potentials of losing their belongings to theft. You should also alert the police when you are out of town.

If you have installed burglar alarms, sensors outside your door, smoke and CO alarms, etc, you are off to a good start in home security, yet you still must consider what measures you can take to ensure that your home is safe. For instance, computers are the number one leaking hole, which intruders enjoy robbing people of all walks of life.

Did you know that computers must also be protected to have complete home security? If not, pay attention. Computers are the number one method that intruders use to steal identities, credit cards, personal information, social security numbers, etc. In fact, nearly all identity theft cases start over the Internet. Computers are one of the easiest areas to break into, which is causing crime to

increase. Never trust anyone. Locally, a woman that worked at our local college was recently arrested for three accounts of identity theft.

TIP: Never store credit card, banking information, or social security numbers on your computer. Companies will often do this, and the companies are partially responsible for causing identity theft. In fact, more than 5000 cases reported in identity theft came from stolen information gained from reputable companies.

Computers sum up the Internet, E-mails, Chartrooms, Bulletin Boards, etc. When you think of home security, you must also realize that E-mail and Instant Messaging is one of the most popular ways that intruders gain access to personal information. Anytime a person types in information online, it puts them at risk. This is why lengthy passwords are recommended.

To secure your home computer one should consider firewalls, antivirus programs, encryptions, patches, etc. Few of the latest home security tools for your computer are the Windows Defender. Beta Defender is a free tool that assists you in staying productive whilst protecting your PC. Popup, security threats, such as Spyware intrusions, viruses, and slow performance can now say good-bye.

Computer users can also gain by downloading Microsoft's Window Malicious Program, which is a removal tool. The tool is designed to check your system. The removal tool will search for Blasters, MyDoom Worm, Sasser, etc. If any viruses are spotted, the program will instantly remove them from your system.

NOTE: I was a victim of both SASSER and the MyDoom Worm, which first hand I can tell you if you do not seek security; you will loose your hard drive. I lost valuable information, and learned a good lesson. Periodically, you can also test your computer at the Housecall website. The virus scan is sufficient and recommended by Microsoft.

Chapter 5 - Innovative Solutions in Home Security

[\(Return to Contents\)](#)

The innovative solutions today are making it possible to have tight home security. While many systems are available however, you must put forth action to assist your home security systems in protecting your home.

Some of the most familiar devices online in the home security area are the Photoelectric Dual Beam Detectors. The detectors supply innovative solutions with a very exciting price tag. The system is compact, and designed to handle weather. The Dual Beams offer Pulse Infrared solutions, which provide you preserved optics.

In addition, you have various beam interrupters, which time your indoor and outdoor activities. Using meters on a high-band voltage output, the system provides you trouble free viewfinders, which include straightforward alignment. Innovative solutions, such as the photoelectric series supply homes year round security, since the devices will work in weathers as low as 13 degrees.

Heat is not a problem, since it will not affect your system if properly installed. The compact system will mount on walls, poles, etc and provide you detection at a range of 240 feet indoors, and 120 feet outdoors. If you are searching for home security, check out the \$65 outfit.

Additional home security devices online include the ALEPH series. This series is a bit more, yet you get more for your money. That is, indoors you get a 400-range protection, while outdoors you receive 200 feet detection.

Ok then, now that we have discussed a few home security systems, let's check out the fingerprint Delete systems. Innovative solutions, such as the Fingerprint Door Locks, are designed to handle your security needs on an automatic locking

system. The system provides you security, by alerting you when your door is unlocked.

You won't have to worry about corrosion, or moisture damage, since this device too is weatherized. The Fingerprint solutions offer you verification that your doors are locked, and combine single units to deliver trouble free installation.

Adding security with intercoms:

Intercoms are another way to add security to your home. Intercoms today are equipped to connect to your home or office and allowing you to install up to six units. The Sound Starter Packs is ideal for beginners, since you receive monitoring solutions that enable you to communicate before opening your door. In addition, you can install intercoms on your telephone system to add to your security. Furthermore, intercoms are a sure way to guarantee that people will leave you alone when you are busy.

Surveillance Equipment:

If you want additional security, you may checkout the dummy/dome cameras, CCTV monitors, security cams, security cam kits, spy cams, video recorders, and wireless cameras online. You will find a wide assortment of products starting at \$19.99.

Additional home security systems include the door and window sensors, door alarms, chimes, etc. You will also find dialer voice and cellular security devices, as well as driveway alarms. Glass break detectors, hardwire alarm kits, hardware alarms, motion detectors, smoke/heat detectors, etc are available online. Some of the favorites include the wireless alarms, signs and decals, and the siren speakers combined with strobe lights. You can purchase products online for as low as \$15.50.

Additional home security includes Mace and Pepper Spray.

NOTE: In some states, it is illegal to use pepper spray and/or mace. Please check your area before making purchases.

Popular security kits:

Some of the popular security equipment sold today is the, hardwire alarming kits and alarms. The security cameras and wireless alarm kits are also popular.

Tip: Did you know that shading your windows, or putting up curtains will keep out predators, and send nosy people down the road.

How to decide if Mace and/or Pepper Spray are for you?

[\(Return to Contents\)](#)

Mace and pepper spray is illegal in some areas of the United States. Unfortunately, the law is constantly taking away our rights to defend our home. Their mission is to have us to entirely rely on them, yet many times the law let's us down. IF you have legal rights to purchase pepper spray and/or mace in your area, I recommend you purchase the product. Pepper Spray, more so than Mace will back down the most violent criminals.

In fact, violent criminals will think twice before attacking the next victim. Most violent criminals when arrested are released back to the street in a short time, and when we as the people defend our life, home, and rights, we are taking actions to stop criminals in their tracks.

Most law enforcement do, not want you to know your rights to defend. Few honest officers will let you know the steps you can take to defend your life. Yet, the few is nothing compared to the many that will not tell you. The fact is you should always call 911 when in danger. Yet, reality says that this is not always possible.

Therefore, you need something to defend your home. Sadly, law works on a double-standard rule system, just as most of the normal society. The law has the right to wear pistols, pack pepper spray, etc, yet we as the people do not have the same rights. Of course, to a degree it is logical, especially if you are considering guns. However, pepper spray and/or mace has never killed anyone.

You can find mace and pepper spray online for less than \$15. The security will boost your confidence higher than any device you will ever install. I know from experience that violent predators will think twice before assaulting you again. In fact, if an intruder is holding a knife, and you have pepper spray and/or mace, (Distant range) you can fire the device into the intruder's eye, and BAM, you have time to get away and call for help.

TIP: IF someone is holding you at gunpoint, staring them in the eye firmly and smoothly talking them through their emotions can help save your life. NOTE: This tactic does not always work on all criminals; therefore use good judgment to decide what type of criminal you are facing. (Serial killers, rapists, etc, tend to care less if you talk them down, yet they will respond to eye contact)

Pepper Spray and Mace work by temporarily blinding the intruder, which gives you time to act. In one incident a man attempted to hit a female in her face, which she used pepper spray to back him down. The woman left the scene safe, yet the intruder left with his tail between his legs.

You want to remember that Pepper Spray and Mace are serious self-defense weapons and should never be used when you are not in danger.

You can wear Pepper Spray and Mace on your belt clips, or place it in your purse. In addition, you can add Pepper Spray and Mace to your keychain.

Again, you want to check with your state laws to make sure that Pepper Spray and Mace are not illegal. Do not risk fines, court, jail, etc, all in the name of security. Sometimes we must adhere to the laws, even when they are not always right; yet adhering to the laws can protect you.

Chapter 6 - Choosing Types of Detectors and Home Security System

[\(Return to Contents\)](#)

Annunciators and Chimes

Online you will find wireless chimes, which include counters. The chimes provide infrared dual beams, which transmit data to remote counters. The beam when interrupted will instantly chime. The chimes will supply exit and entry counts, on a digital platform. You can adjust the sounds of the chimes. If you are searching for trouble free installation, quality announcing, and cost-efficiency, check out the chimes now.

The wireless receivers offer you built-in counters, which provide you selective tones. Push button transmitters provide you a deep range. Few chime online offer beam sensors, which provide exclusive RF and infrared technology. Alert modes offer local alarms, which relay and trigger video recordings at closure. Few chimes offer steep security Identification codes, as well as audible warnings. When your system is blocked, the alert will sound. Built-in exits, entry, and exclusive volume control make the chimes worth your while. Systems today include non-volatile counter memory, alongside two chiming hookups and low powered consumption.

Online you will find units that offer you normal installation modes, or else you can switch to reverse modes. In addition, you will find kits, which include single-end detection, alongside 35 feet detections when installed at your doorway.

Additions to chimes are the Garage Door Openers. If you have a problem, closing your garage when you leave home, the door openers will automatically handle the job for you. The door openers today offer secure automatic and adjustable features, which enable you to tap into security.

Complementing garage door openers are the alert systems. The systems are installed inside of your home or garage. The monitor works to notify you when your door is opened. You can find wireless receivers online.

Motion Alert devices work both indoor and outdoors. The motion alerts will detect any intruders around your home or office area. Few motion alerts come with supervised sensors, which are battery operated. You can purchase additional motion sensors separate. Motion alerts also provide you visual and audio indicator, which detect up to 40 feet. The in service ranges various, yet you can find devices that range up to 300 feet. In addition, you have easy installation, combined with wireless platform receivers.

For less than \$30, you can own a combination of Homeguard and chimes. The units are cost-effective and offer you security for home and office. If you are searching for the system that alerts you when your door opens, the Homeguard and chimes is your option. The units work great in homes, condominiums, apartments, offices, basement, garage, etc. You can also install the unit in campers, RVs, trailers, etc. In fact, you can install the unit anywhere you choose. You will have panic buttons, which you can push anytime you want to sound off your alarm.

Wireless announcers are ideal to provide quality-transmitting ranges over a versatile platform. You can find remote controlled devices online, which will work indoors or outdoors. In addition, you can install the units anywhere you choose.

Today, home security devices have advanced that now you can choose from a wide selection of devices. Keep in mind however that home security systems connect with outsourcers, which offer services. When you purchase home security systems make sure you understand what you are receiving with the package.

If you are searching for home security devices, we urge you to go online and check out the Hardwire Alarms, Security Cams, Motion Detectors, Glass Break Detectors, Signs, and Decals. The top sellers include the Hardwire systems, Security Cameras, Wireless Alarm kits, etc. You will also find clearance centers online to help you save cash.

CO Alarms

[\(Return to Contents\)](#)

CO Alarms are carbon monoxide alarms, which protect homes from colorless, gas, odorless poisons. CO alarms prevent poisons from seeping into your home. Recent studies shows that each day families are at risk of carbon monoxide poisons, and most they die or fall ill to the poisons do not have CO alarms in their home. UL (Underwriters Laboratories) recommend that every home have proper installed CO alarms in their home to prevent fatality and/or illness. The home security systems should be installed properly.

According to reports, each winter month, news hit the media. The stories covered tell us that consumers give way to CO or carbon monoxide. The poisonous gases seep through the air in homes and are often undetected, simply because there was not a CO alarm installed in the home. Since CO alarms are not installed, more than 200 individuals die, while thousands seek medical attention due to exposure of Carbon Monoxide. CO does not provide signs. The only way you can tell if Carbon Monoxide is present is to install CO alarms. According to UL, 80% of the homes in America do not have CO alarms installed.

How does CO get in homes?

Carbon monoxide seeps in when ventilation is poor and furnaces, stoves, water heaters, etc are not properly functioning.

How can the alarms protect me?

CO alarms can protect you, since the equipment detects the level of carbon monoxide, and if the levels are high, the system will send a sound warning.

How can I prevent Carbon Monoxide?

Again, you will need to install a CO Alarm in your home. The system should be properly installed. You will have instructions with the purchase of your CO alarm, which will instruct you how to install. You should avoid installing the device near areas where you family rest. In addition, you should avoid installing the alarm near heated areas, such as gas stoves. Moreover, the device should be tested regularly, and the batteries must be replaced annually. Avoid installing cheap batteries.

What do I do is the alarm alerts me?

You should immediately press the Reset and Silence Button. Once you press the button immediately, call 911. Once you make your call, immediately get your family outside so they can recover with fresh air. Make sure that your family is directed to group when the sound alarm warns you. In other words, prepare you family. Once outside you do not want to re-enter the home until emergency experts test your home and recommend the proper repairs.

How can I tell if I am exposed to carbon monoxide?

Some people live unaware that they are affected by carbon monoxide. However, those who feel the affects may feel dizzy; have difficulty breathing, experience headaches, etc. You may feel nausea, confused, fatigue, as well.

What other measures can I take to prevent carbon monoxide exposure?

You can protect your home by heeding warnings, and complying with recommendations outlined by NFPA. (National Fire Protection Association) You will find helpful resources online. In summary, you should avoid using secondary

heating devices to heat your home. Ultimately, if you must use secondary heaters make sure that you adhere to NFPA rules.

Keep the heaters away from areas, which may cause potential risks. Space heaters are one of the leading reasons that people die or survive home fires. The space heaters give you a hint...SPACE...>this means the heaters need their space to function properly. Common sense tells us that using space heaters unwisely can lead to danger. In conclusion, to avoid carbon monoxide be sure to ventilate your home properly and supply proper heating.

Security Cams and Recorders

[\(Return to Contents\)](#)

Security cameras include the handheld devices. The cameras work to protect your home and office by enabling you to view your child in a separate room. Your home will have around the clock monitoring, which includes each room. Few of the devices offer you audio and visual surveillance capabilities.

The GX series is a portable unit, which makes it possible to watch activities in all areas of your home on a 2.4 Gigahertz system. The high-resolution cam has an integrated microphone that enables you to listen over a rotating small color LCD screen. The screen will rotate providing you optimal views at various angles. The security cams are usable in home, office, daycares, stores, etc. The ideal of this security cam however, is to provide safety for your child and security for you. GX will work during day hours, and night hours. The cam will offer you viewing and hearing capabilities up to 5 feet during night hours.

Cam Features:

The cameras today feature small screens on a crisp imaging device. Security cams may offer you a range over 250 feet on a clear screen. Cams today feature rotating screens, which support other cameras. You have integrated

microphones, which enable you to hear up to 100 feet or more. Few cameras operate from a number of infrared LED, which allows you to see and hear in the night hours. The cameras will connect to DVR's, VCR, and TVs. In addition, you have automatic and manual switching capabilities between cameras, as well as color adjusting abilities. You can also adjust contrast, audio and alarm volume. Few cameras operate on battery.

What you can use the cameras for:

Particular GX series enable you to use the cameras in contract monitoring, patient, child/baby, business, store, pet, home entrances, guest monitoring, etc. You can also use security cams to record parties and/or home videos.

Wireless cams, such as the DVR series will provide you pro surveillance. In addition, you can record information for references, or use the device to monitor your child. The handheld units provide you the ability to hear and see what your child is doing, even if he/she is in another room. You will have audio and video capabilities over a high-resolution cam with integrated microphone. In addition, few cams have integrated DVR's, which function by allowing you to set motion, recordings, etc. You can set the cam manually or mechanically. Motion detection can be recorded or scheduled at selected time, which gives you tighter security. The cams may use Memory Cards, which make it easy to record and store information on your portable unit. The 128 Megabytes of Memory can store one hour of information on your cam. In addition, you may receive overlay on video recording, which includes time and dates. Features will facilitate you the ability to playback, or search recorded videos. Most cameras today have integrated speakers as well.

My favorite security cam is the Teddy Bear. This handsome feller will sit anywhere you choose, and will hide a camera beneath his fur. You can cuddy with him when the cam is not in use. Inside Mr. Teddy Bear is a small wireless camera that produces color. The bear will store up to 2.4 Gigahertz of footage,

while spying with his eye. The bear will help you monitor your child in separate rooms, without the child aware of your action. Teddy has an eight infrared LED, which enables you to see in the dark without turning on the lights. You will have receivers, which connect to your DVR, TV, or VCR. The cam works from battery, and can easily be placed in areas out of sight.

Get Dome

[\(Return to Contents\)](#)

Dome security systems are available online. The cameras are designed to provide you security. The cost-effective surveillance cams can be installed discretely indoors, since its compact unit makes it easy to install completely out of sight. The Dome cams include power supply, which permits you to install CCTV Monitors.

The fixed cams are handy, since the cam includes a lens (3.5mm) that produces more than 350 Television lines. Monochrome resolution makes it possible to monitor and view footage at a variety of angles. Few cams have backlights, which compensate as it works along balance, crisp viewing providing you clear imaging. The Domes can work in most lighting conditions, and will offer you surveillance at a superb distance.

Vision Tech is the smaller Dome cam Visions, which operate from battery. The unit is designed to surveillance your area without being spotted. You can mount the cam to any surface you choose. The Vision Tech series resembles the older Camcorders Internet users once used to communicate online. The cams are higher priced however than ordinary Internet (EYEBALL) cams.

If you are in the mood for total security, you could check out the Clearvu Pro's. The cams produce high-quality resolution and offer you TV Line connection up to

400 or more. The cams produce color, which its casing is attractively made to resist all types of weather.

The rustproof devices can connect to your DVR, TV, VCR, etc. The RCA adapter makes it possible to hook-up to your device. Few cams have more than 20 infrared LED lights, which its object is to reach more than 40 feet during night hours. Integrated sensors will light up when the system is turned on. The energy reserving devices is ideal for anyone searching for monitoring devices to protect their home. Motion range is great with most cams made today.

Cameras today are easy to setup. Few cams offer anti-glare aluminum shields, which assist in blocking the sun. With many security cams, you receive mount brackets, which provides you distance motion over an easy to connect unit. You can operate the cams through electric, which the cables reach higher than 60 feet, depending on the model. The particular cam named is handy to use at home, in retail departments, convenience stores, restaurants, daycare, parking lots, schools, hospitals, etc. You can even use the cam in warehouses.

The DOME (IP) Speed cams combine Tilting, Panning, and Zooming options to allow you to monitor an area in remote locations. You could work in your office while monitoring your home online. SPEED cams do not require installation of software, since the programs are integrated through advanced technology solutions.

You will have integrated servers along with 1-Megabyte of Flash Memory, and an additional 8 Megabytes of dynamic Memory. Cams use motion over a streaming JPEG video, which means you can set resolution to your liking. IP LCD Address Displays offer you a frame rate higher than you can image. Cams today connect to your home computer from a USB connector.

You can use cam applications to monitor your home, office, property, etc. Doctors can advantage from the cam, since it enables them to monitor their patients. In addition, you can install the unit in daycare, or anywhere you like.

What you get:

Few cams come with Window Stickers that provide Warnings, Powered Adapters, Toll-Free Support Lines, Ethernet cable, guarantees, and Utility disks. The disks will supply you backup drivers along with instructions and utilities for your convenience.

Decals and Warning Alarms

[\(Return to Contents\)](#)

Decals and warning signs are when you come right down to it, the same as Dummy Cameras. What happens is you post signs on your doors and windows alerting unwelcome visitors that you have an alarm system installed in your home. Even if you do not have a home security system installed, the intention is to deceive criminals. The deal is, criminals are often two-steps ahead and have probably read similar articles as the one I am writing. Therefore, will all criminals believe decals and warning sign alarms? No. It is as simple as that, yet the less advanced criminals will probably fall for the bluff.

Still, if you want to spend less and save time, you can purchase decals and warning signs to alert burglars. The signs may help to reduce odds of your home or office becoming the target of the next burglar. Warning signs and decals only cost around \$1.50, or \$12 at most. If you want to invest in the products, you might also consider outdoor sensor lights. You can purchase the security devices for a fraction of the cost.

Decals include the “**Emergency Exit**” signs. The signs stick to any surface, and stops anyone unauthorized to exit or enter areas where emergency exits rest. You can purchase signs that will stand out and stop anyone in their tracks.

Decals and signs such as the home security, makes announcements that your office or home is protected. The signs will stop particular criminals who are searching for easy fixes.

You can combine decals and signs with hardwired or wireless home security systems and get the most for your peace of mind. Hardwired security systems are sometimes hybrid, which offers automatic control. The systems may integrate with audio, which powers your security system, thus allowing you to add onto the system. Hardwire systems often work on keypads, which you can program as you wish. You can find a selection of home security systems online, such as hardwire devices. The alarms may offer you straightforward touch screens, which work from graphic interfaces. The menus will help guide you through the steps of building on your message system. Hardwire may also have integrated phone lines which include cut monitors. This means you have support for several end-users. In addition, you have pager usability, alongside chime capabilities.

Online are the wireless systems, which are popular. Consumers enjoy the wireless systems since it provides an easy solution. Rather than trying to figure out how to wire home security systems, consumers can install the system with ease and halt intruders promptly. You can install wireless systems in your home, office, apartment, etc.

Simons is one of the wireless kits available. With the kit, you receive Simons Control Panel, Transformer, Transmitter, Instructions, Cord, Jack, Pet Resistant Motion Detector, Video capabilities, etc. Simon devices give you the option of setting up monitoring systems, or combining the monitoring system with pagers

and phones. In other words, when an intruder steps over his boundaries, your phone, or pager will instantly alert you.

Coupled with Simon security systems you will find accessories, such as the wireless touchpad.

For more information related to decals, signs, home security, wireless devices, hardwire, etc, check out the products online. You will find decals that alert unwanted guests that you have hidden cameras installed on your property. You can add Dummy Cameras with your purchase to truly, set off the signs. The burglars may see the signs, cams, etc, and take off running. Yard signs are also available and you will not need sticks to install the decals.

Door Alarms

[\(Return to Contents\)](#)

To choose door alarms, you must also consider emergency exit alarms. The two combine to provide you suffice security. Door alarms are basic units alongside emergency exit alarms that provide you security at prices you can afford. Door alarms can help ward burglars away, yet you may want to add window alarms as well, since burglars will use windows to enter your home.

Your best bet is to lock your windows and doors when you are not able to watch what goes on. Still, you can add door alarms, as well as emergency exit alarms to ward away burglars.

TIP: Down through the centuries people have told you to put nightlights in your bedroom area. The notion is great to prevent tripping or falling during the night, but from experience, I can tell you, darkness is your best friend. Burglars do not know your home area, and will trip or fall, giving you time to call for help.

If you have a lighted home, burglars will often leave and go somewhere else, yet if there is no motion in the home, some burglars will attempt to break in anyway. Unless a burglar has studied your home prior to his attempt, likely the prowler will not have a chance in the darkness. You should keep a phone at every bedside and add locks on your bedroom door to enhance security. The phone should have a silent keypad. If you have door locks on your bedroom, the burglar will waste a few minutes trying to break in, which gives you adequate time to call 911. DO not panic!

Door alarms; include the Homeguard, which combine chimes. The door alarms are great security solutions, which provide you a measure of protection at a price you can afford. You can install the alarms anywhere you choose, such as office, home, etc. The alarms will alert you when your door opens. The chimes will sound when someone opens the door, which can offer you the chance to click the Panic Button.

Emergency exit alarms stop exits and entries from unauthorized persons. You can add the signs to your emergency exits, which can give you high effective of protecting your area. The exit alarms may help to ward off burglars. Emergency exit alarms work by signaling you when someone has stepped over their boundaries. If someone opens your exit door, the device will emit an electronic stopper, which will pierce the ears of those entering. You can preset the alarm to sound 3-minutes, or 30 seconds. The alarm has a key function, which allows you to silence the alarm if you want the unauthorized to enter.

Door alarms include the decals as well. You can purchase signs, or decals online to complement your emergency exit alarm. The sign will alert anyone nearing the area that you have installed alarms. The signs are usually 5 by 5 and are nothing more than a deterrent, yet it could help. For a few bucks, why not give it a whirl.

Door Chimes

[\(Return to Contents\)](#)

Some of the top crimes of the year are burglar, which many are committed by teenagers. Unfortunately, media has put forth a world of chaos, which is backed by low moral, standard, and values. We are faced with an ever-increasing crime world, which someone has to pay. Guess who that someone is. Someone is you and I, as we pay higher taxes, deal with inflation, and lose our belongings respectively. What can we do? We have choices, which include home security, yet we must also consider our influences, and the influences of our children.

We can install door chimes, which announce intruders through transmitting devices, which store data on remote counters. The devices use beams, which are claimed to be uninterrupted, and provide us exit and entry digital counts on an adjustable chiming sound. Ultimately, we can pay a fortune to install home security devices to help battle the ongoing crime in our world. Still, if we do not take the effort to change our own behaviors, what good will home security alarms do?

For instance, millions of people worldwide install smoke detectors. Once the smoke alarms are installed, millions of people forget about it. What happens is the number of deaths and injury increase, simply because these people failed to maintain, clean, replace batteries, and replace parts when recommended. Dust clogged in the alarms, and after a while people started believing that the alarms just sound randomly. During the night when an actual fire starts, the people may roll over in bed, disbelieving the alarm. Ultimately, the alarm makes no sound when a fire starts, simply because someone forgot to change the batteries, or replace the unit as recommended. WE have a problem.

You can purchase door chimes online, which include wireless receivers with integrated dual counters. In addition, you will have selective tones on a push button transmitter that gives you a range up to 200 feet. The chimes are operated

by battery, and works from beam sensors, which are structured on infrared technology platforms. Volume control, counter memory, digital counters, audio warnings, etc, are all the features you will receive, yet what good will it do you if you do not change the batteries.

TIP: Did you know it only takes a couple of seconds to change your batteries in smoke alarms, CO alarms (Carbon Monoxide), security alarms, etc. Did you know that the few minutes you take to change your batteries could save your life?

Online you will find indoor and outdoor motion detectors, which alert you at the time someone enters your area.

The sound alarms detect interruptions in your surrounding areas, which supervised sensors combined with monitors send sensors, which work from batteries. You will have video/audio indicators, as well as a motion range up to 40 feet. The receiver operates at a range around 300 feet, which gives you the sensor motion alert device you deserve for home security. Yet, again, what good will the chimes do you if you do not change your batteries.

Since many people disregard warnings that cost life, I guess technology has to come up with the solution that does not include batteries. Until then, do, not be the next person that ignores the warnings.

Driveway Alarms

[\(Return to Contents\)](#)

Driveway alarms are available on wireless platforms, which the monitor sensors will offer you a measure of protection. You can install the wireless alarms in your yard or driveway, which installation is relatively easy. The quick installation systems provide you indoor and outdoor security at your home or office. When you know when someone is approaching your sanctuary, you will have the security you need, since you can act fast.

Driveway alarms include the Reporters. The systems enable you to take notice of important visitors. The system detects incomers and reports all incoming vehicles and people from its receiver. You can install the system anywhere you choose, which helps you to notify, detect, and protect your home. The unit can be installed at your driveway, office, home, garage, etc. The alarm will send a tone, which alerts you when oncoming traffic has arrived at your doorstep. Reporter alarms offer you four transmitters, which include distinctive rings. As well, you have temporary mute buttons and a range on line sight ratings at 1200 feet. The transmitters operate off batteries.

The Next Generation home security includes the wireless OPEX 1000 model. The system is a monitoring device, which provides you security around the clock. You can install a unit indoors, outdoors, in your office, or home. Complementing the system, you will have remote-controlled solutions. Chimes are integrated to add to your security.

OPEX has designed the Next Generation applications that complement the home security systems. You will find driveway Annunciators, entry alarms, walkway chimes, and wireless doorbells. Many services are offering delivery, and site guard solutions. The monitoring devices will prevent shoplifting, vandalism, loss, etc. The Next Generation systems are designed on versatile platforms, which provide you the ability to install the unit anywhere you choose. You can install the

units at your desk, on your ceiling, fence posts, walls, etc. The units are weatherproof, and give you a range up to 50 feet on a fan patter 17 feet connection.

You have a detection pattern, which enables you to adjust the unit and aim it anywhere you choose. The handheld portable transmitter offers added convenience, since you can clip the unit to your belt, etc. The groundbreaking home security devices will alert you when the batteries are low, as well as offer you easy installation. The new devices have millions of base codes, which assist you in transmitting. In addition, you can preset the device.

The voice alert systems are wireless Annunciators, which provide you cost-effective solutions in handling your home security needs. Voice alerts incorporates digital voice recording capabilities on a PIR wireless platform.

The six zone monitor capabilities assist you with voice alerts, which are recorded to an all weatherized wireless transmitter. This gives you the option of recording up to six voices on a supported unlimited numbered sensor transmitter. You can adjust speaker volume, etc, as well as program voice recordings. The relays trigger the device when intruders come to your property.

In addition, you have indicator lights, which flash when you've missed a message. The lights will include signals for playbacks. At the push of a button, you have the option to playback your messages on a 433.92 MHz frequency receiver. The unit records all messages on a digital platform, user recordable, and a tight state. Few devices are installed on tabletops, or walls, which include speaker dimensions and receivers at different widths, Heights, dimensions, etc.

Common home security systems, including the wireless use transmitters, and beam patterns to detect intruders. Few systems include optimal detections, which include beam sensitivity, adjustable amounts, and delay timers.

Freeze Temperature Alarms

[\(Return to Contents\)](#)

Freeze...you have been targeted by the freeze alarms, which alert residence owners when freezes can start water damage and burst your pipes. Freeze alarms are ideal for cabins, homes, office etc. The alarms mechanically (PRESET) will call your phone number, or the number you designated. When the temperature falls below 7 degrees, the alarm will kick in, call a number, and use English pre-recorded voices to let you know it is time to take action. If you do not answer the call, the alarm will continue alerting you every few minutes and up to two hours.

Freeze alarms enable you to cancel callbacks around the world. The unit's works with answer machines to monitor your home, office, etc. The answering machine has a pre-recorded voice, which alerts you when potential hazards exist. Freeze units function off batteries, which you should replace as recommended.

Technology has advanced so that now you can install home security units' hassle free. You simply plug the freeze alarms into your telephone line. The units do not interfere with your daily phone activities.

Freeze alarms are great, since unlike most home security systems you will not have to pay fees on monitoring, setup, etc. You can also purchase units, which alert you when the temperature rises. If the heat rises above 85 degrees, the alarm will alert you.

Few freeze alarms will allow you to call up to three numbers. The answering machines will dial designated numbers you assign and alert you through voice messaging when the temperature falls below a stable level. The alarm will also alert you when your backup battery is up for replacement, as well as alert you when the power outages occur for longer than an hour. In addition, you have the option of phoning your alarm from any destination, to verify temperature readings.

If the power is off in your home, the alarm will alert you. In summary, you can set or change telephone numbers from remote areas, as well as check backup batteries, temperature, and power supply.

The SensaPhone Dialers is another type of temperature monitors. The device incorporates sensors, which will report the status of power failure, cool/hot temperatures, leaks, etc. If you have a head start on such conditions, you can stop damages before it starts. The systems can allow you to call up to four phone numbers. Units online are available, which offer you hours of backup battery capabilities, which means the unit will work even if the power is out. Units today integrate built-in microphones, which are synthesized to deliver you quality voice alerts. You can find the home security units for less than \$400.

The SensaPhone 2000 series will monitor your home, and report to you up to eight remote areas. The unit incorporates digital input with analogs to deliver visual reports up to 32 destinations.

The dialer devices deliver you synthesized voice messages, which alert you via phone when the something is wrong. The devices can save you a fortune, since if you can deal with the situation quickly, you can prevent weather damage. The device will monitor both high and low weather conditions, power failures, seepage, water leakage, and even monitor humidity. The device alerts you by first introducing itself, followed by informing you the status of weather conditions, power supply, etc. If the battery is low, you will receive a warning also. Sound level is also controlled.

Dialer systems and software are outstanding devices, which technology has advanced to the point you can have the complete home security you deserve all at a price you can afford.

Motion Detectors

[\(Return to Contents\)](#)

Choosing motion detectors are easy when you know what is available. In addition, if you know what you want, it is easy to purchase your choice of motion detectors. First, you must decide what the detectors can do for you.

Infrared detectors are available, which work as temperature gauges. The units are engineered to deliver home security in zones. Some units offer more than others do, in that the units provide full coverage. In addition, the units today are designed to guard against false alarms. Security devices, such as the motion detectors provide easy mount, easy installation, and a selection of pulse counts. You receive white light security, sleeves, distance lens range, and interior cable ducts, which provide ample space for wiring.

The ZoDIAC models are available, which are designed to deliver comprehensive performance against false alarm. The compact units are easy to maintain, and offer versatile swivels on an optimal mounting platform, such as walls or ceilings.

Additional home security devices include the CoMET models. The units work on reliable technology-based platforms. The home security devices work by detecting environmental changes that could affect your home. The coverage for few units reaches up to 40 feet, which provides you compensation against temperature. In addition, you get the best with the pet immune options. Pulse counts, protection against white light, LED prism, etc, are just a few additions added to today's home security-motion detectors.

The Sharp Shooters designed on infrared technology, supply detectors that are sensitive to motion. The alarms will not sound when static, vibration, changes in temperatures occur, or when light is stray. The signals work from a digital processor, including ASIC which reduces false alerts. The advantage of these devices is that you do not have sensitivity that other devices do. In other words,

the alarm will not sound when dust, bugs, dirt, or changes in the temperature occur.

Many alarm systems today will detect motion at various ranges on a db alarm system. In addition, you have the option of programming security codes, or adjusting sensor heads. When the battery is low, the units will send you a signal on indicator lights.

The digital encores are controlled by various technology solutions, which announce motion when detected. Few units have integrated channels that help to eliminate wiring faults. Most units today are easy to install, and you have the advantage of adjusting the units to fit your needs.

Few of the units available today, offer 15m x 15m of pattern coverage. The temperature is compensated by pulse counts, which you have the option of selecting. Most units are easy to mount, and the features provide you trouble free, and quick installation capabilities. You can also disable or enable LED with few systems.

In addition, you can choose vertical and horizontal patterns, which you can adjust. The pulse counts may include polarity on a SMD structure, which filters white lights.

Motion detectors are affordable. In addition, you can combine motion detectors with hardwire alarm kits; hardwire alarms, wireless alarm kits, security cameras, etc. Online you will find clearance on home security, which can provide you a savings on motion detectors combined with the home security solution of choice.

Online you will also find contact door and window systems, door and window alarms, chimes, outdoor sensor lights, driveway alarms, and more. In addition, you will find garage alarms, dummy cameras, siren speakers and strobe lights,

smoke/heat detectors, and more. Do not forget to add smoke detectors and CO (Carbon Monoxide) alarms to your home security package, to achieve the prized protection you deserve.

Outdoor Sensor Lights

[\(Return to Contents\)](#)

Outdoor sensor lights are available online. You will find a wide selection to choose from, which will provide you information you will need to make a decision. Few of the lights available include the motion sensor floodlights. The lights are designed to protect your home against criminals.

Floodlights can augment family security, since the units will instantly click on when someone steps on your property. Many criminals will flee when they step into lighted areas. The lights include the brilliant outdoor lights, which are recommended by Law Enforcement.

The lights combine Fresnel lens, which works from an electronic platform. Few lights are operated by in-home light switches. You merely turn the switch on, and when someone steps on your doorstep, the sensors react by shining light down on the intruder.

In fact, outdoor sensor lights can help you decide to open the door on the days you are not sure that you want home guests. The lights sensor day and night, which alerts you when someone is at your door. You can peer out your window to see who is outside, and if you choose to open your door to known people, you can do so. On the other hand, if you elect to ignore your guest, merely sit down, relax, and wait until he/she leaves.

Outdoor sensor lights will add security to your home environment. The light fixtures are built on sections of invisible electromagnetic spectrums, which

consist of radiation alongside wavelengths. The radio waves, light, etc issue sensors that when trigger will alert you. The sensors respond to movement. Few units offer superb structures on high-density systems. You can choose from plastic casings, or metal.

The units today are precision creations, which include molded lens that curve. You will find superior mounting devices, which mount on circuit boards. The option will provide you superb reliability alongside longer life span. In addition, few units have integrated surge protectors, which include automatic reset options. Again, you can find unlimited mounting devices, coupled with flexible coverage.

You can find motion sensors online, including the advanced globes. The lights are designer solutions, which combine reliable sensors. The light fixtures are elegant, which adds to your security. Few units have three Fresnel side lenses, which makes distortion difficult. In other words, it will not be easy to sway this light in another direction. The watertight solution will help to stop false alarms, failure, etc while saving your home.

The clear globes are motion sensors, which combine lasting motion sensors on an elegant fixture. The units produce light from three Fresnel side lenses. Sensor lights will shut off and on. In other words, if someone is standing on your doorstep, the light will shine. When the intruder leaves the area, the lights will shut off.

Complementing motion sensors, you will find Dummy Cameras online. The cameras will make intruders think that you are monitoring their every move. The lights will likely scare the intruder away, yet the dummy camera will make him become intimidated, especially if the intruder has harmful intents.

You can also find CCTV Monitors, wireless cams, video recorders, spy cams, dome cams, intercom and sound systems, wireless/hardwire alarms, and more

online. If you want full security, add a home security system, smoke alarm, CO (Carbon Monoxide) alarm, Freeze and Temp alarm, water and flood sensors, etc to your home.

In the world we live, there is no such thing as too much security. The more you add security to your home, the less likely intruders will visit your home. To learn more, visit online sources.

Window and Door Sensors

[\(Return to Contents\)](#)

Home security includes window and door sensors. The sensors enable homeowners to protect areas of their home, which may pose vulnerability. The sensors incorporate magnetic seals, which assist in detecting movement around your window or doors. You can find a wide assortment of sensor devices online.

Sensors start at \$2.95. The miniature sensors are surface magnetic, which mount to your wires, etc. You merely stick them with the adhesive backing to any area around your home.

The Overhead contacts for doors are operated on two batteries. The switch is protected by a die-cast casing. The Overheads comfortably mount to any surface magnetic inclined. You will receive brackets as well, along with the stainless steel cables.

Sensors include the Adjustable Magnets, which include brackets. The units are quick to install and come with cable. The units are sealed to protect your device against water, and are designed from a rugged impact shock absorber.

Additional contacts include the Miniature Fitted Press Magnetic devices, which provide you a case window solution. You can also add the device to sliding doors, windows, etc.

Rollerball Contacts is another of the sensor devices offered. The devices include activation points, which make the Rollerball device versatile. This device is handy for windows or doors, and provides fast magnetic installation on a complete space mount.

Surface Magnetic Mounts are contact devices that fit comfortably inside offices or homes. The device is handy. You can mount the device to your walls with the device terminal screws, which are conveniently concealed.

TIP: Never install a door lock outside of your home area, where screws are apparent.

In addition to Contacts or sensors, you will find Dummy Cams online. The security cams will provide you a cost-effective solution in preventing criminals from entering your property. The cams include indicator-flashing lights, which make unwelcome company believe they are being watched. The cam fits well at loading docks, entryways, driveways, garage, offices, etc. You can also install the cam indoors or outdoors.

Sensor lights are great outdoor home security necessities. The sensor lights will automatically click on when someone steps on your doorstep. The lights can scare away any prowler, making him/her think you are at home. If you wanted to double up, you could put bug lights outside as well. Get rid of bugs and prowlers at the same time.

External sounders will augment your home security system. The sirens will connect to any control panel. You can also install the device to home security

system if applicable. You will need to check your home security system to make sure installation is possible. Sirens offer a combination of sound, strobes, anti-drills, approach, etc. You will receive a weatherized impact system, which supplies easy installation, as well as maintenance. If the sirens will integrate with your home security system, you will also have remote control.

Strobe lights make up a great additive in home security. Strobes are regulated, which the output produces illuminating lights, while flashing consistently. You can find strobe lights online, which do not interfere with radios.

Some of the most popular home security systems available are the Hardwire Security devices. The devices can work well with additives. Hardwire security provides you protection, which ensures your privacy. In addition, you will have flexibility, which allows you access to any form of home security you choose.

Using Smoke and Heat Detectors for Fighting Fire

[\(Return to Contents\)](#)

Fighting fire starts with adding smoke and heating detectors to your home, office, etc. Somewhere in the universe, everyday families are escaping home fires. Out of the thousands of people fighting fires, many are killed or injured. The common reason that such tragedies occurs, is that people fail to heed warnings, or lack information to prepare them for such dangers. Few homes do not have fire alarms, yet, many homes have fire alarms installed, yet these people fail to maintain the units.

In fact, statistics show that millions of smoke alarms installed in homes and offices are outdated. Most of the fires start and spread, simply because someone did not replace batteries, or clean the system. It only takes a few minutes to clean, yet most people today are too busy, or plain lazy.

In addition, annually scores of children die from fire-related tragedies. Most children die because they were not informed, or else the alarms did not operate properly. Wretchedly each week more than 17 children fall to death due to fire. Children are taught in school how to escape fires, but most fail to pay attention. Due to this fact, the death charts are rising. According to firefighters, every 30 seconds the figure of home fires double.

Online you will find a wide assortment of smoke and heat alarms. If you do not have an alarm installed in your home, it is time to think security. Firefighters and police hate nothing more than people ignoring warnings, and rules. Follow the rules to avoid becoming the next victim. Many smoke alarms offer wakeup commands, which you can record from your own voice.

You can find smoke alarms online are designed to assist children out of the home when the alarm sounds. The alarms combine amplifiers, recording ability, etc to a home security unit. The unit is way past due, yet it is available now. If this device were invented thousands of years earlier, we would see perhaps one death recorded yearly.

You can use the units today, record instructions on how to escape, and when the alarm sounds; your children will hear your voice instructing them out of the home. What an amazing twist technology has invented. Yet, it is sad it took them this long to think.

What's nice about the voice alarms is that you can purchase the alarms for around \$39.95. This is a great price, and reasonable. I believe those charging a fortune for home security systems need a swift kick, yet those charging reasonable prices need a nice pat on the back. WE all deserve security without paying a fortune.

Hint: Replacing your batteries can help save your life.

Tip: Did you know that most home fires start at nighttime when the family is sleeping?

Tips:

Many people go through life unaware that they maybe subjected by carbon monoxide. The fact is we are all victims of carbon monoxide, yet too much can kill. Learning the systems and installing CO alarms in your home, can save your life.

Carbon Monoxide Symptoms

Dizzy; difficulty breathing, experience headaches, and so on. You may feel nausea, confused, fatigue, as well.

If you have installed a CO alarm, and it sounds, you should quickly press the Reset and Silence Button. Once you press the button, call 911. Next, immediately get your family outside of the home and wait for the emergency team to arrive. You should inform your family to, always meet in groups to make sure everyone is out of the home. In other words, prepare you family. Once outside you do not want to re-enter the home until emergency team tests your home and recommends the proper repair if applicable.

Additional Fighting Fire Tips

[\(Return to Contents\)](#)

Home security is a leading demand, since every day someone dies or falls injured to fire, carbon monoxide, burglary, etc. One of the main reasons that people die or fall injury to fire and/or carbon monoxide is because they fail to maintain or install CO alarms or smoke detectors. The smoke detectors and CO alarms can save your life. Still, once you install the alarms you must keep the systems free of dust particles.

Dust particles can make the alarms sound. In addition, the batteries must be replaced as needed. You should also test your alarms at least once each week. Don't be like those people who install fire and CO alarms and leave it at that. The majority of deaths and/or injuries related to fire and/or carbon monoxide is for this reason alone.

Tip:

After 1998, new carbon and smoke alarms were designed by technology, which the alarms sound like horns. It is important that your children, you, and your family members become familiar with the sound.

The new smoke alarms today make horn sounds, which work in patterns. The sounds may repeat loudly, beep, pause, and send three additional beeps before pausing again. Learn the patterns. CO alarms are similar, in that the alarms produce a loud sound, repeat the horn sound, and sends out four beeps before it pauses. The alarm will then send another four beeps before it pauses again. CO alarms are similar to smoke detectors, in that the alarms sound off when carbon levels put you at risk. Fire alarms sound off when smoke accumulates in the air.

TIP:

Even if you experience a small fire that you feel you can handle, call 911. Once you extinguish the fire get out of the home. The firefighters will help remove

smoke from the home, as well as search for hidden fire. Fire will hide itself. Therefore, never assume that you have completely removed fire from your home.

The one thing you should teach everyone in your family is that help is only a telephone call away. Children should learn that lighters and matches are for adults only. Inform your children what could happen if they fail to heed warning.

In addition, your children should be educated about fire extinguishers, smoke alarms, fire hydrants, water buckets, and garden hose. The hose and water buckets can be used to put out smaller fires, yet it is important that children call 911 instead. The firefighters are minutes away from your door and can handle even small fires better than your children can. Firefighters train in fire and these men are aware that even small fires can become deadly. Fires tend to hide.

Tip: Not every area has 911 emergencies. Therefore, check your area to learn what your emergency contact is. Post the information on your refrigerator.

In addition, teach your children to leave the home immediately if a fire starts. Tell them to call the emergency phone number at your neighbor's home.

Plans are important. Planning helps you to avoid dangers. With this in mind, we can layout a floor plan to help you teach your children what to do in the event of fire. Remember to practice regularly.

How to lay a Floor Plan:

You want to draw an outline of your home. Include windows, kitchen, dining room, bathroom, bedrooms, living room, dens, etc. All hallways near bedrooms should have smoke alarms installed and checked regularly. While you write the plan, allow your children to help you choose two ways out of the home in the event a fire occurs. Make sure you choose two ways out of each area.

In addition, make sure that your family chooses a meeting place outside of the home in the event a fire starts. Once you finish the floor plan be sure to post it somewhere where everyone can view it. Once you finish your plans, be sure to plan weekly or monthly fire drills.

Chapter 7 - Choosing Other Types of Home Security

[\(Return to Contents\)](#)

Biometric readers, door locks, gate controls, safes, keypads, and readers are types of home security devices to consider. Particular if you are not prepared to spend a fortune on home security monitoring devices, you may want to select tight security that will offer you similar protection. To help you make good choices, we can consider a few security devices.

Biometric Readers:

Biometric readers are a Door Lock that Fingerprints incoming and outgoing traffic. The unit automatically locks, which stops you from leaving your door open each time you leave your home or office. PCB seals combine with epoxy, which help to prevent weather damage, including corrosion. The device fingerprints your door and verifies when the door is locked. Most units are easy to install. You can find biometric readers that work for left-hand or right-hand users. The units are made of stainless steel, and are easy to use. You can register or erase fingerprints at your leisure.

Biometric units are designed specifically for those who forget to lock their doors. The 3-way unit unlocks, fingerprints, and provides you automatic keys, which you use PIN numbers to operate. LCD Adopted solutions embed infrared detectors, which fingerprint detected locks mechanically. The fingerprint capacity varies, yet you can find max security online. Fingerprints are numerical and reach up to 99, which master fingerprints authorize you to erase or include sole fingerprints. The Modules are structured with wires that connect to security, and offers you trouble free installation, over a low voltage warning system. Sensor lights work alongside buzzers, which give you indication when your door is unlocked.

Door Locks:

Door locks, including the Swing Locks enable you to use mechanical features to close and open doorways. The locks are designed to provide ease for those who find it difficult to use their hands. The openers are easily installed on any door type. The features include safety options, such as the “Hit and Stop.” In addition, you have fail-safe use, which means that when your power is out, you can still open and close your doors. Door Openers incorporate automatic features, which clutch proofs blocks damage. Users will enjoy audio alerts, automatic travel limitation, selective modes, toggle use, etc. Timers can be set to close your door at a specific time you choose. Users have programmable abilities, which enable you to use remote control.

Gate Control:

Home security gate controls use wireless action combined with intercom. Oracle is a brand name, which the wireless solution is designed to open gates automatically. Units today give you superb battery life, which means you have the top gate opener accessibility for two years. Gate openers are similar to garage openers, since you can operate the unit inside your vehicle, or home.

The Oracle-3000 Gate System is designed to be the wire-free solution to enhance the operation of accessory-ready Automatic Gate Openers. With up to two years of battery life, the Gate Access Unit can be used with compatible key-fob remotes and Intercoms to, remotely operate the gate opener from inside your car or home. Oracle provides you gate controlled units, control panel access, remote control, portable intercoms, and panel keys.

Keypads and Readers:

Keypads and readers are door openers that allow you to open doors while using tags.

Safes:

Safes are useful to store expensive belongings. You can purchase fire-safes online, which the vaults will protect, your property even if your home catches fire. The vaults have heavy-duty locks, which enable you to store a large volume of assets without worry. In addition, you can store valued documents to protect them.

Chapter 8 - Purifying Your Home by Removing Chemicals for Complete Security

[\(Return to Contents\)](#)

Home security extends to your environment. You can install smoke detectors, CO (Carbon Monoxide) alarms, home security systems, etc, in your home, yet if your air and water is toxic, you are still at risk.

Home security extends to air and water supply. If you want complete home security, you must also add humidifiers, water purifiers, air purifiers, etc. You will find various systems online, which includes the Hepa systems. Hepa is one of the better units, since it was designed to reduce radioactive chemicals within the arenas of high-volume plants. Homeland Security has tested and approved the water filters, air filters, etc. Environmental protection agencies that approve security systems, such as the air and water purifiers are ideal.

Online you will find biological CAP sanitizers, which are purifying systems. The units work to cleanse the air, which increases your health conditions. In other words, mold, mildew, dust, dust mites, microns, pollen, etc, in the air will cause health problems. Health problems include asthma, hay fever, sinusitis, allergies, etc.

Units today will supply you biozone ionic solutions. The units will clean the air, while working to purify your environment.

Most people are not aware that shower and bath water contains toxins. The toxins absorb in your body, and gradually affect your health. In addition, drinking water has its own degree of toxins, including Chlorine, etc. The chemicals all join to submit toxin in you system. Furthermore, the body builds up waste and toxins. The toxins and waste are removed, yet a large volume will accumulate and stay in your system. The problem leads to health problems, such as Colon Cancer.

Now, you can install smoke alarms, CO (Carbon Monoxide) alarms, and home security systems, yet if you want tighter security, you must consider your water and air. In fact, adding smoke alarms, CO (Carbon Monoxide) alarms, and home security systems, combined with water and air purifiers can save your health.

Harmful particles in air and water can affect your health. Even the slightest scale of hair dander from pets can cause allergies, asthma, etc. In addition, mold can send you to the hospital. Therefore, if you want home security, purify your air and water.

Now we can learn some helpful facts to assist you in securing your home. Smoke alarms are designed to help you escape enclosed areas. The alarms should be installed in all bedrooms, hallways, and at the top of your stairs. In addition, it is up to you to maintain the units, keep them clean, and replace the batteries as needed.

You should also replace the smoke alarm at least every ten years. CO alarms protect you against carbon monoxide poisons. The systems should be installed in your hallway, and on all levels of your home. You should also maintain the units, keep them clean, and replace the batteries as needed.

Fire Extinguishers should be installed in your garage, kitchen, and 15 feet away from fireplaces. You should test the units regularly, making sure the extinguishers are pressured.

One thing you want to teach all members in your home is that help is only three pushes of your button. Dial 911 if your home catches fire, or any alarms sound.

You can purchase alarms online, which include silence buttons. Alarms with silence buttons are recommended. You should also teach your children that alarms are intended to save lives, and not designed as toys.

TIP: IF you do not have a water purifier, you can run your tap water at least 5 minutes before drinking to remove a level of toxins.

Chapter 9 – Tips to Use Your Home Security System

[\(Return to Contents\)](#)

Now that you have bought your home security systems, including CO alarms and smoke alarms it is time to learn how to use them properly. Let's get started:

- Before you activated your alarm, did you take care to lock all doors and windows?
- Your home security systems have sensors. Do you take the time to keep objects, children, pets, etc, away from the devices?
- Do your family and you understand how to deactivate your alarm in the event it should accidentally sound?

If your alarm accidentally sounds, it is important that you do not panic. Panic is the number one reason people fall to trouble. Rather, keep your code on hand, or embedded in your head so that you can quickly deactivate your system. You will also need to decide if someone has violated your home, or if a fire, carbon monoxide, etc, is potentially threatening your home. Many devices sold today have monitoring systems, which you will need patiently to wait for the company to call you to verify your safety.

NOTE: Fire alarms, CO alarms and home security systems are designed to protect you in real-life situations. It is important to teach her children to leave alarms alone. False alarms can put you in your family at risk. You should perform routine maintenance and proper cleaning to prevent your alarm from sounding when no harm is present at your home.

In addition, you will need to contact proper authorities, such as your company installers when you start home repair projects. Many repairs can cause your alarm to sound, or else could cause damage to your alarm. For instance, if you are hanging drywall, the dust particles could enter your system and cause failure.

To help your family become familiar with shutting off alarms, conduct practice. Practice will your family and you, remain in control.

TIP:

Did you know that some companies offer backup along with home security packages. The packages may include environmental monitoring, fire systems, regulated reporting, guard response, panic alarms, mechanical testing, and backup. Backup is endorsement that your family will have a plan when disaster occurs.

The tips offered are designed to help you continue home security without interruptions. In addition to tips to help you avoid problems, we can also discuss maintenance.

Maintenance is better known as safeguarding your home. When you take time to perform maintenance, you take the time to secure your home. Maintenance includes cleaning. If your home security system, fire alarm, or CO alarm (carbon monoxide alarm) is subjected to dust, it could cause your alarms to sound.

TIP:

Did you know that becoming familiar with the sound of your alarms in your home could save your life? It's true, when you recognize the sounds you will instantly react when alarms sound.

NOTE:

Did you know that practicing drills could help your family prepare for disaster?

Floor Plans:

Did you know that writing a floor plan, practicing, and posting it in areas where your family can see a daily, could also save your life?

Conclusion

Life is too short to take risks. In life, we have warnings that we must all adhere to, to avoid danger. The warnings are obvious in some instances when signs are not posted. For instance, we know that fire and water are dangerous. Children must be taught to, never play with fire, and to avoid dipping in water that could claim their life. Even bathtubs pose risks of drowning. In addition, we should never plug outlet cords in wall sockets where water is near.

Not so long ago Washington D.C officials recalled several brand name Fire Extinguishers. We can discuss fire extinguishers to learn more about the brands recalled to help you avoid danger. Home security is a deep subject, which requires careful attention in providing safety to your home. This means you must stay alert to recalls as well. According to D.C. Officials few fire extinguishers has failed when consumes discharged the triggers. We don't want this to happen to you.

If you have fire extinguishers in your home, make sure the extinguishers are not recalls. Model FE1A1OG is one of the fire extinguishers you may need to send back, especially if the fire extinguisher was purchased in 1999, after September. Your sticker should have "100% Quality Tested," on the label. Few of the fire extinguishers that have not been recalled are the Kitchen KFE2S5 series. The Auto FESA5 model has not been recalled either. In addition, the Marine FE5G-M, Recreational FE5G model, Garage and Home FE10G model, Marine 10, Heavy-Duty/Plus, and the Commercial Extinguishers have not been recalled as well. You can go online to learn more about fire extinguishers and recalls.

Now that you have a basic idea of recalled fire extinguishers and have made sure your extinguishers are not in the recall list we can conduct a test to see if you have your extinguishers set up properly.

Do you have a fire extinguisher in each level of your home? Do you have an extinguisher in your kitchen? What about in your work area, does it have a fire extinguisher handy for use? Do you have an extinguisher near your fireplace, or in your garage? Does your van, car, or RV have a fire extinguisher? What about your basement area: If you answered yes to each question, then you have a secure home. However, you will need to answer this last question to have complete security. Do you test your fire extinguisher weekly to make sure it is pressured? If you said yes, great job and keep up the good work.

Now that we've discussed fire extinguishers, we need to check your home for fire alarms and CO alarms. Does your home have fire alarms and CO (Carbon Monoxide) alarms? If so are the alarms tested weekly, and are the batteries replaced when needed? Do you have the alarms installed in each bedroom, hallway, or at the top of your stairway? Do you dust the alarms regularly? Are the alarms installed at least fifteen feet away from your gas stove or furnace?

Do you have a fire alarm installed in your bedrooms, living room, hallway, every level of your home, family and playrooms, kitchen, basement, and at the top of the stairway?

Next, we can discuss burglar alarms. Do you have a home security system installed in your home? If you are ready to purchase a home security system, consider the source. You want to make sure that you purchase quality alarms. Does the company offer competitive prices? Does the company have a history of good results?

Does the company sell updated home security devices? Will the home security system supply you 24/7 home security via use of a monitoring component? Will you have a guaranteed monitoring system? Does your system have a lifetime warranty? Are the parts covered in the warranty? What about replacements:

In addition, few companies who sell home security systems will offer discounts if you have insurance coverage. The most important question, is will the home system give you and your family the peace of mind they deserve?

Finally, by reading this complete guide, you should now have an idea and full guidelines on how to choose and protecting your home security for you and your family.

I hope this was a pleasant read 😊

The Unselfish Marketer
