

How To Upload Your Reseller Template To The Internet And How To Collect Payment For Your Product With E-Junkie

Please make sure when reselling this product that you also include this PDF tutorial for your customers so that can be up and running in little time as well.

In your resell rights package you will find your index.html template. This is the template that we will upload to the internet that your customers will be able to purchase this resell rights product from.

First off you will need a domain name and hosting.

These are some great ones, I personally use www.bluehost.com because they have unlimited bandwidth and storage space. The possibilities are endless with growing your business because there are no restrictions that come with some other hosting companies.

Some other great hosting companies are: www.hostgator.com, www.dreamhost.com, www.monsterhost.net which pretty much offer the same thing as www.bluehost.com. I know that www.hostgator.com allows you to create a reseller account so that if you want to flip websites you can still bill the customer if they choose to keep their hosting with you which makes for a nice passive income.

Let's use www.bluehost.com in this example, any of the other hosting companies have cPanel so this tutorial applies to them too.

cPanel is a great time saving user friendly interface that allows you to effortlessly upload your template to the web. It's easy to use and is built in to your webhosting back office.

In my opinion cPanel is a little more straightforward than using an external FTP client which requires you to use a 3rd party software tool to upload your web template to the web.

It's entirely up to you.

You register your domain name through www.bluehost.com, make it something relevant to your product you're selling so that your prospects will be able to find your product on the internet.

I usually register with www.bluehost.com for a year, that means that the hosting fee only averages out to a mere \$7.95 per month for all the bandwidth and storage space you can handle with the advantage of adding as many domains names to be hosted from that one account as you want. A great money saver. That means you pay for the domain name only which you can also register with bluehost.com for a cheap \$10 and then upload it to your existing bluehost.com account.

When choosing your domain name make it relevant to your product so that it will show up in the search engines each time your prospects search for it.

Phone Number:

Use +1 . 888 555 1234 format.

Mobile Number:

Fax Number:

Email Address:

This is where your receipt will be sent.

The next thing to do is enter your personal and payment details and take special note of your password you create upon sign up, you'll need this to login into your new hosting back office.

You can pay by either credit card or Paypal. Click "Next". After successful payment your site should then be activated within the next 24 hours, usually sooner.

Don't forget to check the email address you used when joining for your receipt which contains your login details, links you can access your site from and the forum and support if you have any questions.

Bluehost.com has 24 hour live online support should you have any questions at all.

NOTE: Don't forget to add your name and email address to your template at the bottom of the page!

A free html editor that I like to use is Mozilla, www.mozilla.org

After downloading Mozilla, open it then select "Window" from the toolbar, a drop down menu will appear then select "Composer".

Using "Composer" you can "Open" your index.html template, just locate wherever your index.html is located, in this case it's inside the "Toothache" folder on your desktop or downloads folder or wherever your computer defaults downloads to be saved.

This will allow it to display in edit ready form in Mozilla.

Scroll to the bottom of the page and change the blank name and email details to your own.

Then click "Save", then "Browse" to view how your website will look once it's uploaded.

Uploading your template to the web is a process known as FTP (File Transfer Protocol) which simply involves transferring your web template and files from your computer to your hosting site making it viewable on the World Wide Web.

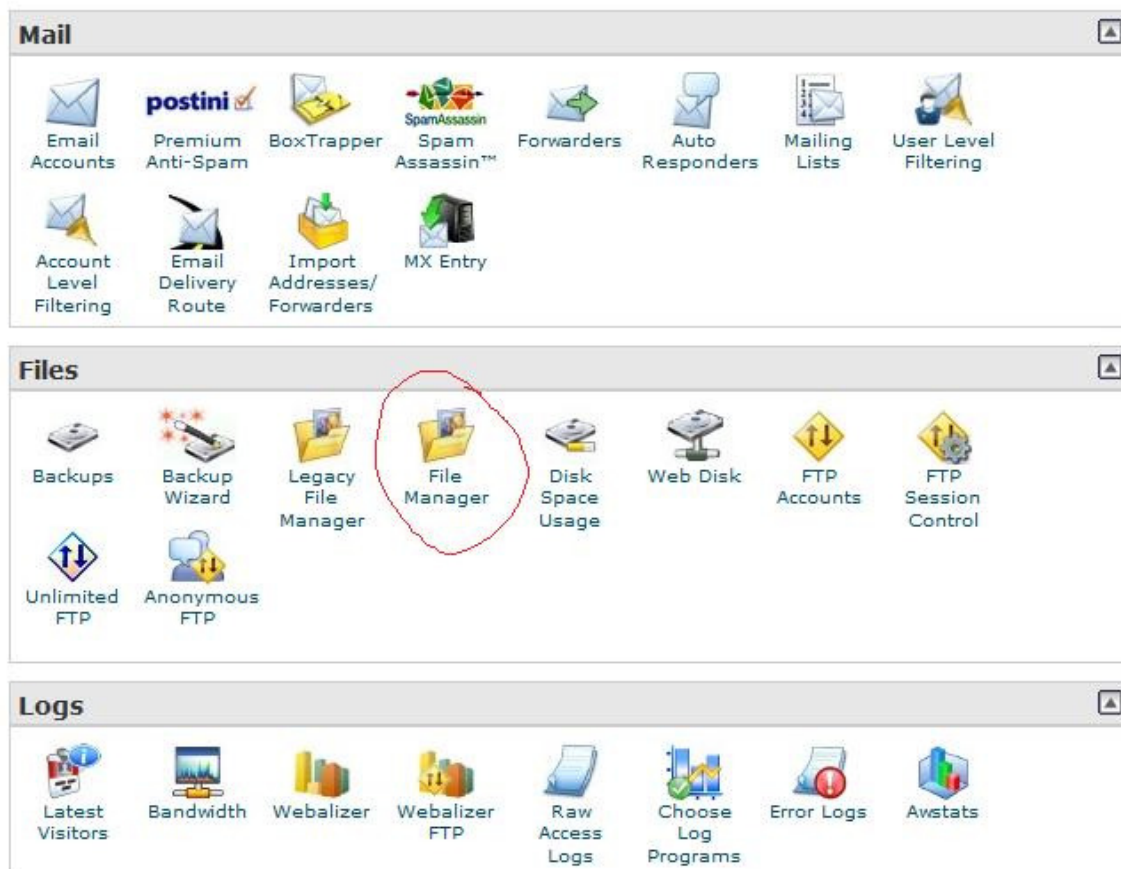

Simply go to www.bluehost.com then enter your login details.

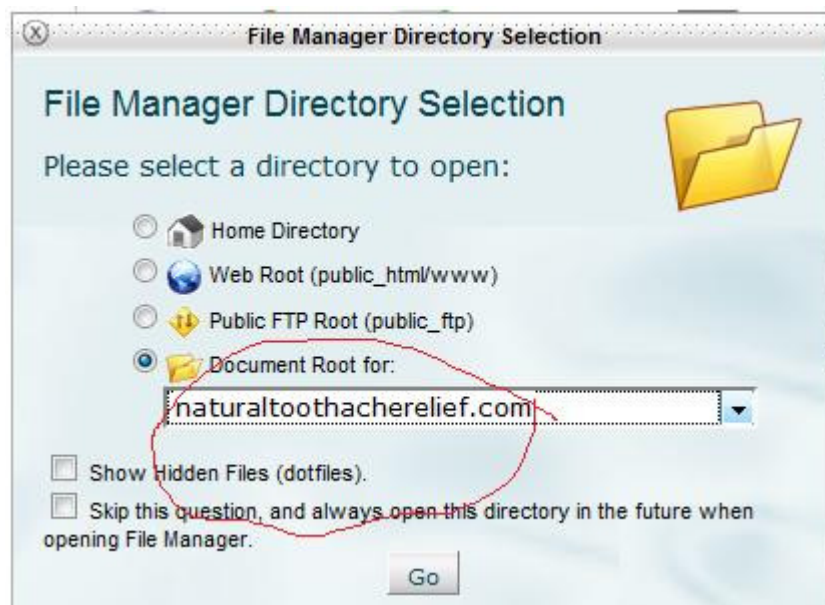

Domain: naturaltoothachere.lie
Password:
CONTROL PANEL LOGIN

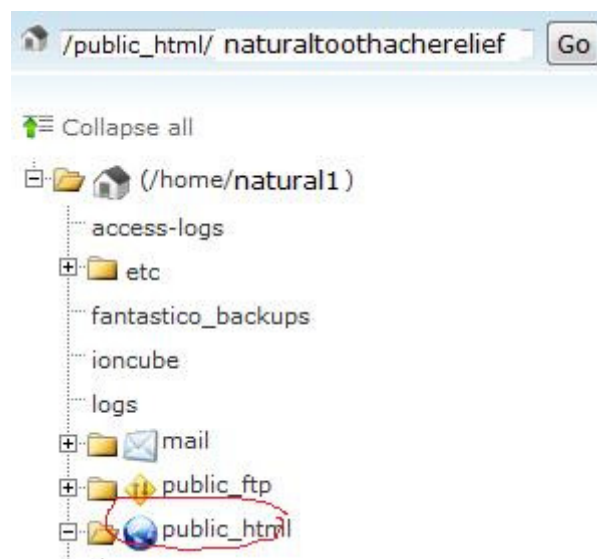

What's Included?

After you successfully login you will be taken to your cPanel page. Scroll halfway down the page and you'll find the "File Manager" folder. Click it.

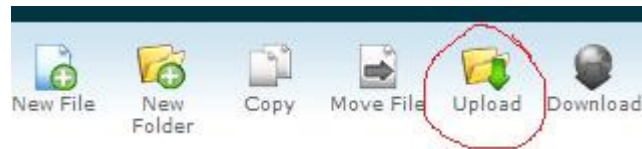

Click on "Go".

Click on the blue earth icon because you're going to open the public html folder to upload your template to. Then click the "Upload" folder icon in the tool bar near the top of the page.

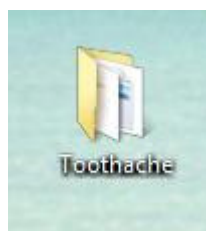

Upload files

Maximum File Size allowed for upload: 50 MB

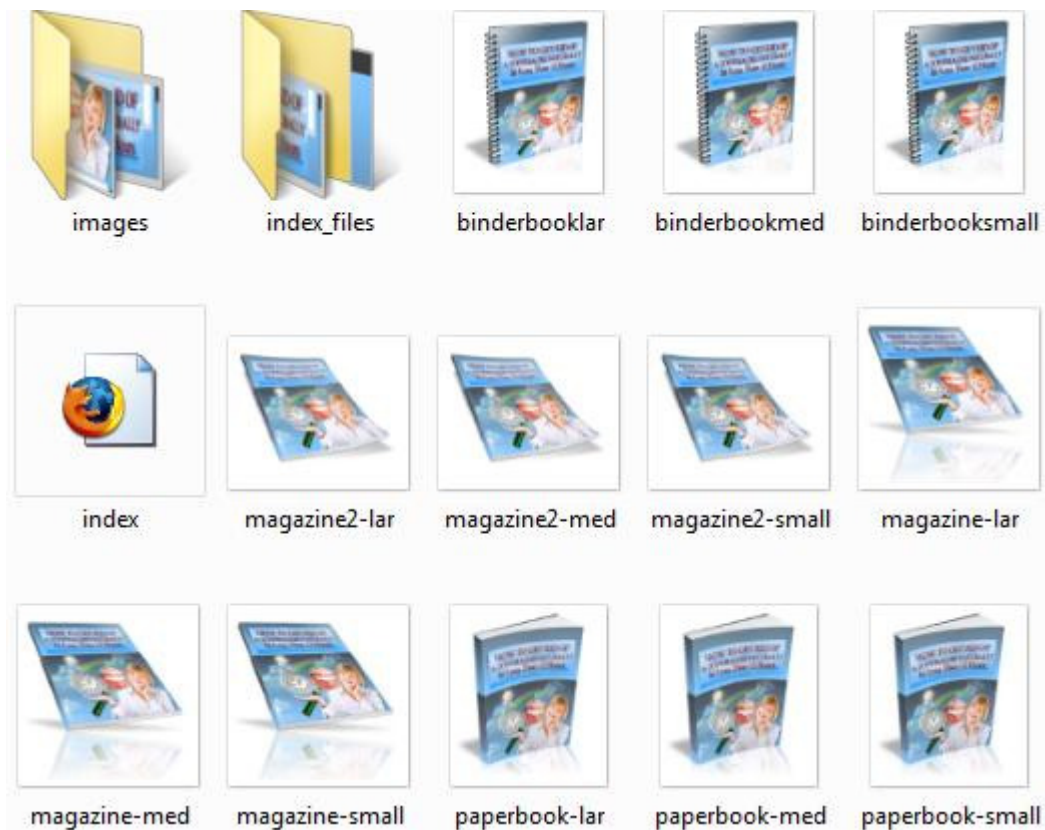

Please select files to upload to **/home/natural1**

Overwrite existing files: ☐

Click "Browse" to upload your template to the web. This prompts you to find where your template is located.

Double click on your file folder to open it up. You can upload each graphic by just clicking on each one.

You need to upload your template index.html, the ebook cover image on the site which is images/binderbookmed.jpg, index_files/orderbutton.jpg, images/guarantee.gif, index_files/orderbutton.jpg.

Special Note: within the "Website" folder, you will find an index.html file, this will not display properly as it is linked to the index_files folder. In order to see how the website will appear, please click the index_files folder and click on the index.html file within that folder and you will see how the website will appear when live. Don't forget to upload index.html file within the index_files folder when FTP'ing to the internet.

It's important that you upload all of these graphics so that they appear on your website. Forgetting to upload these will result in broken picture links. As for your buy button, for now we will use E-junkie as a payment processor and we will use their Paypal payment button code.

You will notice that inside the Website and graphics folder there is a folder for images and index files. For this particular template to display properly they must be uploaded as well.

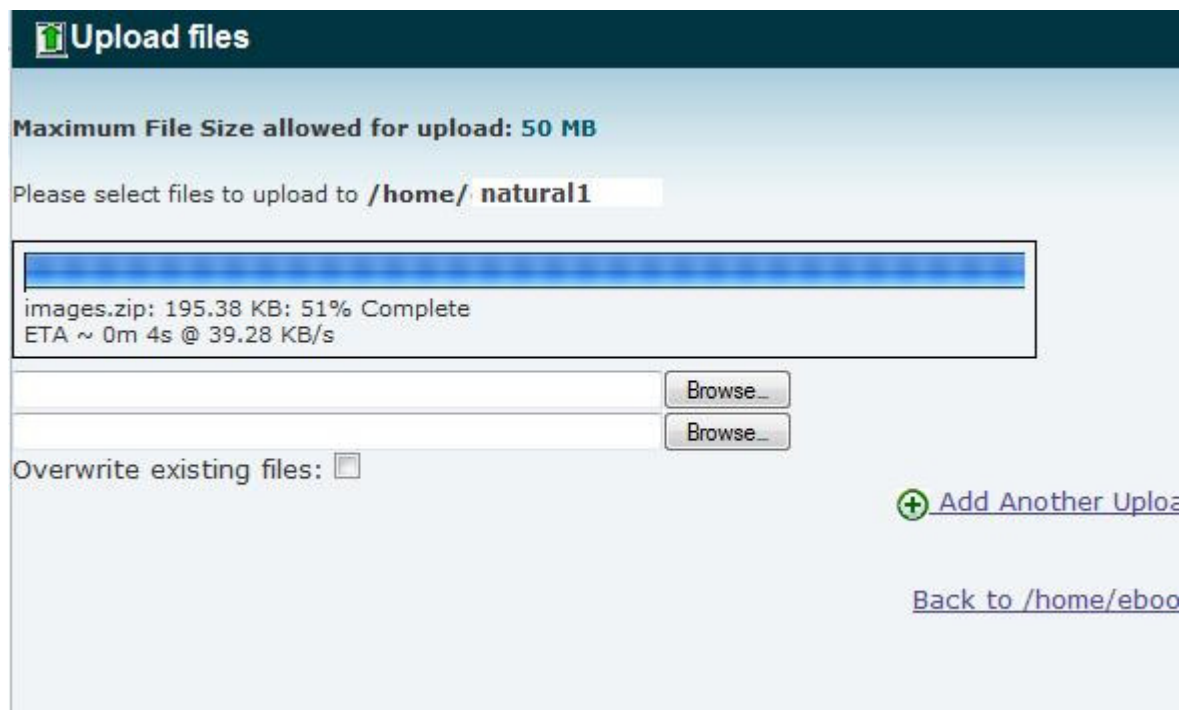

Because bluehost only uploads single files at a time we need the entire folder so that the template will be able to access the files for display from the correct location.

So that the template can get the files from index and images folder these must be uploaded as a group.

We can do this by zipping the index and images folders by right mouse clicking on each folder, go to the menu to "Send To", then select "Compressed zip folder".

Browse to access the zipped folder, find the folder then click "open", this will immediately upload the folder you want.

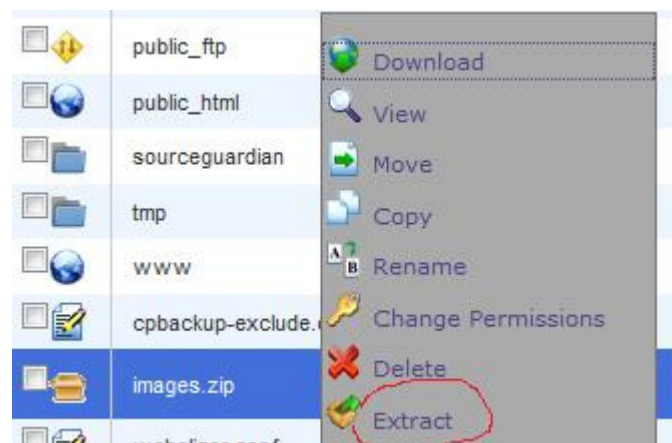

Do this for both the images and index files folders.

The screenshot shows the 'Upload files' interface on a Bluehost website. At the top, there's a dark blue header with a green upload icon and the text 'Upload files'. Below this, a light blue banner states 'Maximum File Size allowed for upload: 50 MB'. The main area has a text prompt 'Please select files to upload to /home/ natural1'. A progress bar is visible, showing 'images.zip: 195.38 KB: 51% Complete' and 'ETA ~ 0m 4s @ 39.28 KB/s'. Below the progress bar are two empty input fields, each with a 'Browse...' button. At the bottom left, there's a checkbox labeled 'Overwrite existing files:'. At the bottom right, there's a green plus icon followed by the text 'Add Another Upload' and a link 'Back to /home/eboo'.

For the images to display properly they must be unzipped.

Go back to your cPanel File Manager, scroll through your files until you find images.zip, then you simply right mouse click on the file and select "extract". This unzips all of the files so that your template can access them from the correct location enabling your images to display correctly.

After the contents have been extracted, I go back and delete the original zip file (images.zip) as you no longer need it.

All you need to do now is enter your URL in your browser bar:
www.naturaltoothacherelief.com click the refresh button and voila, your site is now active on the internet.

**HOW TO GET RID OF
A TOOTHACHE NATURALLY

**How To Get Rid Of A Toothache Naturally In
Less Than 12 Hours**

**"Discover The Secrets The Ancient Egyptians Have Known For Thousands Of Years In
The Relief Of Toothache Pain"**

Dear Toothache Sufferer,

I know what you're going through is no joke.

The pain you're feeling right now can turn an otherwise regular day completely upside down and bring a grown man to his knees, infact it is said that next to child birth and passing a kidney stone, a toothache is the next most unbearable pain a person can suffer.

If you're tormented by a toothache and I'm guessing that you are, I'll keep this short because I don't want to stand in between you and your pain relief which you see have just minutes from now.

Video tutorial of cPanel FTP.

Collecting Payment

I like to use www.e-junkie.com

They are a 3rd party secure gateway payment processor. For just \$5 per month they secure your orders and handle your product delivery for you. There is no bandwidth or transaction limits or transaction fees.

How much you pay each month depends upon how big your products file size is, for example if your products total size comes to 50MB you only pay \$5 per month for e-junkie to process and deliver your product. The next size plan up is \$10 per month for file sizes of 51 MB to 100MB.

Great value for money especially since your delivery is completely automated for you. When you get into digital products you really want your business to be as automated as possible so that your customers receive their orders instantly without having to wait and without you even having to be there.

Another feature I like about e-junkie.com is that the number of times your product is downloaded is limited which prevents your download link from being shared everywhere. The system usually defaults to a maximum of 5 downloads. You can also set the link to expire within 24 hours.

You can get an idea of the charges per month based upon the following table.

Number of Products	Storage Space (MB)	Can Issue Downloads From Any Server's URL?	Monthly Cost (US\$)
10	50	no	\$5
20	100	no	\$10
20	*	*	\$8
40	250	no	\$15
60	500	YES	\$18
60	*	*	\$12
120	500	YES	\$27
150	*	*	\$16
250	500	YES	\$40
350	*	*	\$19
500	700	YES	\$60
700	*	*	\$28
750	900	YES	\$90
900	*	*	\$40
999	999	YES	\$125
1000	*	*	\$50
1999	1999	YES	\$145
2000	*	*	\$100
2999	2999	YES	\$165
3999	3999	YES	\$185
4000	*	*	\$120
4999	4999	YES	\$205
5000	*	*	\$130
5999	5999	YES	\$225
6000	*	*	\$140
6999	6999	YES	\$245
7000	*	*	\$150
7999	7999	YES	\$265

To be up and running quickly and accepting payments through e-junkie you'll need a Paypal account. This is where your money will be deposited after e-junkie successfully processes the order.

If you don't yet have one you can grab one here: www.Paypal.com

If you have an existing Paypal account and you're not already, it pays to get verified.

This means that your business limit, the amount of funds that you can both send and receive is raised. Being verified insures buyer confidence

so it's worth getting. What the verification process does is confirm your credit card and postal address and that you are who you say you are.

When you get your Paypal account or have an existing one just get verified by clicking on your "My Accounts" tab and clicking the "Unverified" link and following the instructions.

A small \$3 refundable fee will be deducted from your credit card. On your monthly credit card statement will appear the \$3 charge along with a PIN number. You simply add this PIN number to verify your details and the \$3 fee will automatically be refunded to you. You are now verified.

Open an account in <https://www.e-junkie.com/ej/register.php>

Log into your account and edit your profile. You need to add your Paypal email address so that e-junkie can link it to your payment button that you use for collecting payment.

SELLING WITH PAYPAL

PayPal Email

Enter the PayPal email where you will accept payments.

Once you have entered your Paypal email address as well as your other personal details, click "Submit".

Then, click on "Add Product"

Now we're going to add the Toothache pack you received when you ordered. It's ready to upload in its current form because it's already in zipped format. It contains everything your customers need to get going so there's nothing else for you to do other than to upload it to your e-junkie account.

Uploading Your Product to E-Junkie

After clicking the "Add Product" link the next window will open up.

Search.. Documentation Search Google™ Custom Search

PRODUCT CONFIGURATION

Name

Select your product's requirements:

- ☒ Single file download
- ☐ Redirection
- ☐ Send stored codes ☐ Send generated codes
- ☐ Package files from other products, affect their inventory
- ☐ Inventory control
- ☐ Sales Tax, VAT ☐ Shipping/Buyer's address
- ☐ Let buyers edit quantity in cart
- ☐ Let buyers edit price (ex: donations, 'pay anything' items)
- ☐ Variants having individual price / weight / stock / SKU
- ☐ Variations which tell more about the product ordered
- ☐ Send transaction data to a URL

Price Currency

OPTIONAL SETTINGS

Email Subject - **OPTIONAL**

Email Message (no HTML) - **OPTIONAL**

If you have any questions please contact me at:

An email containing above message will be sent to the buyer along with the **greeting** (including **buyer's first name**) and if applicable: **download link, expiration limit and registration code**.

☒ Receive a copy of email sent to buyer

☐ Enable templated email ([more info..](#))

Item Number

OPTIONAL - If your product does not have a specific item number, please leave this field blank.

NOTE: You will be shown the option to upload the file once you have added your product.

We start with naming your product. For this example, let's call it "Toothache Relief".

Check the "Single File Download" box. I leave the "Let buyers add quantity in cart" blank because they only ever need to order 1.

Set your price, for this example I've made it \$27 and left the currency in "US Dollars".

Next we add an email message thanking your customer for their purchase and adding a contact email that they can reach you should they have any questions.

Check "Receive a copy of email sent to buyer", I always like to know that each customer has received their thank you email with the contact email address in it.

Click "Submit".

NOTE: Please make sure that you have **enough free disk space** in E-junkie Seller Admin > View Summary, before uploading the file.

Upload

Please wait while the file uploads.

Uploading

Progress: 8.5%

Speed: 127 Kbps

Estimated time left: 00:16:28

Your product is now uploading into e-junkie's system. The upload time is dependent upon the size of your file.

Once your file is uploaded you need to grab your special Paypal button code to accept orders.

Go back to the "Seller Admin" page.

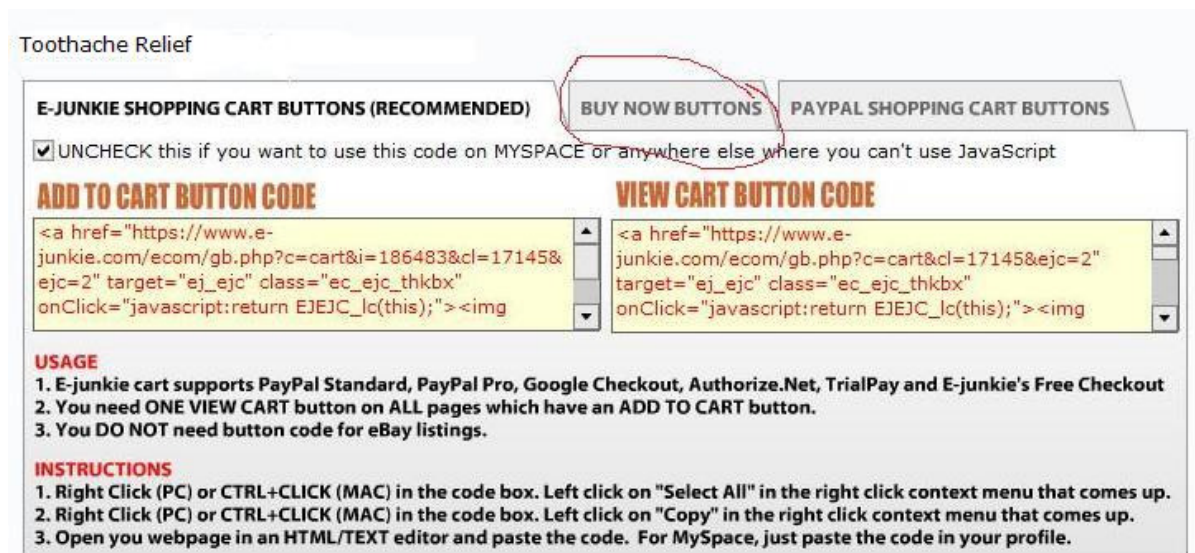

Under "Manage Products" click on "Get BUY NOW/CART buttons for your products"

Your product will come up then click the "GET BUTTON CODE" button.

I usually select the "BUY NOW BUTTONS" tab.

E-JUNKIE SHOPPING CART BUTTONS (**RECOMMENDED**) BUY NOW BUTTONS PAYPAL SHOPPING CART BUTTONS

```
<a href="https://www.e-junkie.com/ecom/gb.php?i=186483&c=single&cl=17145" target="eieicsingle"></a>
```

☒ PayPal Standard ☐ Google Checkout ☐ Authorize.Net

USAGE
1. You DO NOT need button code for eBay listings.
2. These buttons do not come with our shipping or tax calculation.

INSTRUCTIONS
1. Right Click (PC) or CTRL+CLICK (MAC) in the code box. Left click on "Copy" in the right click context menu that comes up.
2. Right Click (PC) or CTRL+CLICK (MAC) in the code box. Left click on "Copy" in the right click context menu that comes up.
3. Open your webpage in an HTML/TEXT editor and paste the code. For MySpace, just paste the code in your profile.

NOTE: Button code changes if you CHANGE **item number**, **suggested/min. price** or **variants/variations**. If you use Buy Now buttons and have started using discounts, then code changes to include the discount code form.

BACK TO ADMIN GET BUTTONS FOR OTHER PRODUCTS EDIT THIS PRODUCT

You will see a bunch of html code, this is the code for your "Buy Now" button you are going to paste onto your website so that your customers can pay for your product.

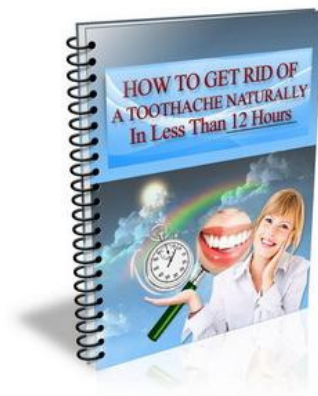

Highlight the code by left mouse clicking and dragging over the code, Right mouse click, you should see a drop down box open. Scroll down until you reach "Copy" then left mouse click on it.

Open up your index.html in Mozilla (www.mozilla.org) and then scroll down to your order button.

We're going to place a word inside your order button that will enable us to properly position where your order button will appear seeing as we're dealing with html code.

The word you use can be any of your choosing as long as it's a word that doesn't appear anywhere else on the page. This makes it easier to find and pinpoint where your code should go.

Let's use the word "Xerox".

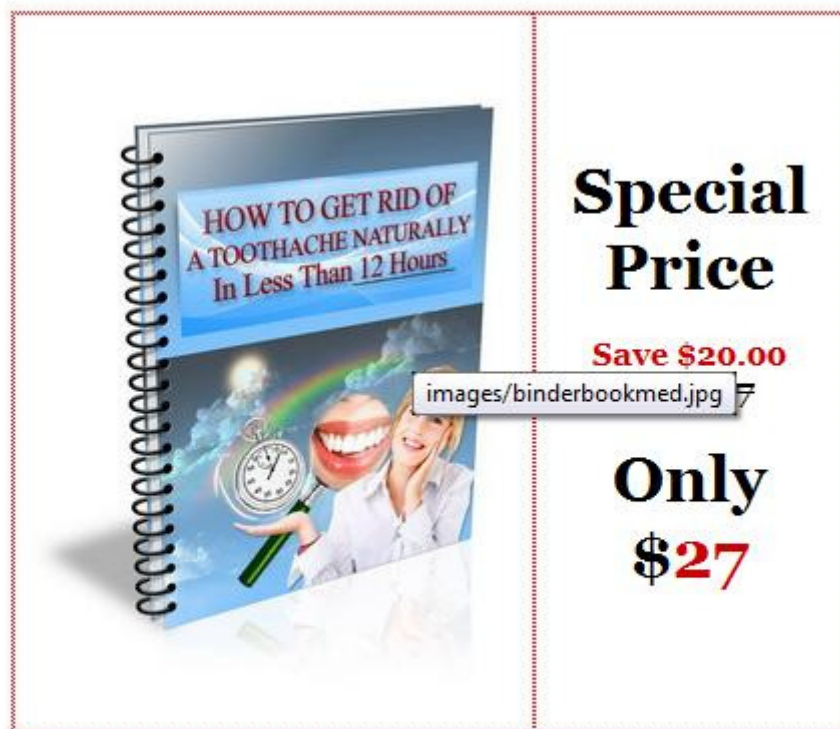

**Special
Price**

Save \$20.00
~~Not \$47~~

**Only
\$27**

Click on the order button and delete it because we have to replace it with our fully functional e-junkie order button. Then type the word Xerox in place of the old "Click Here To Order" button.

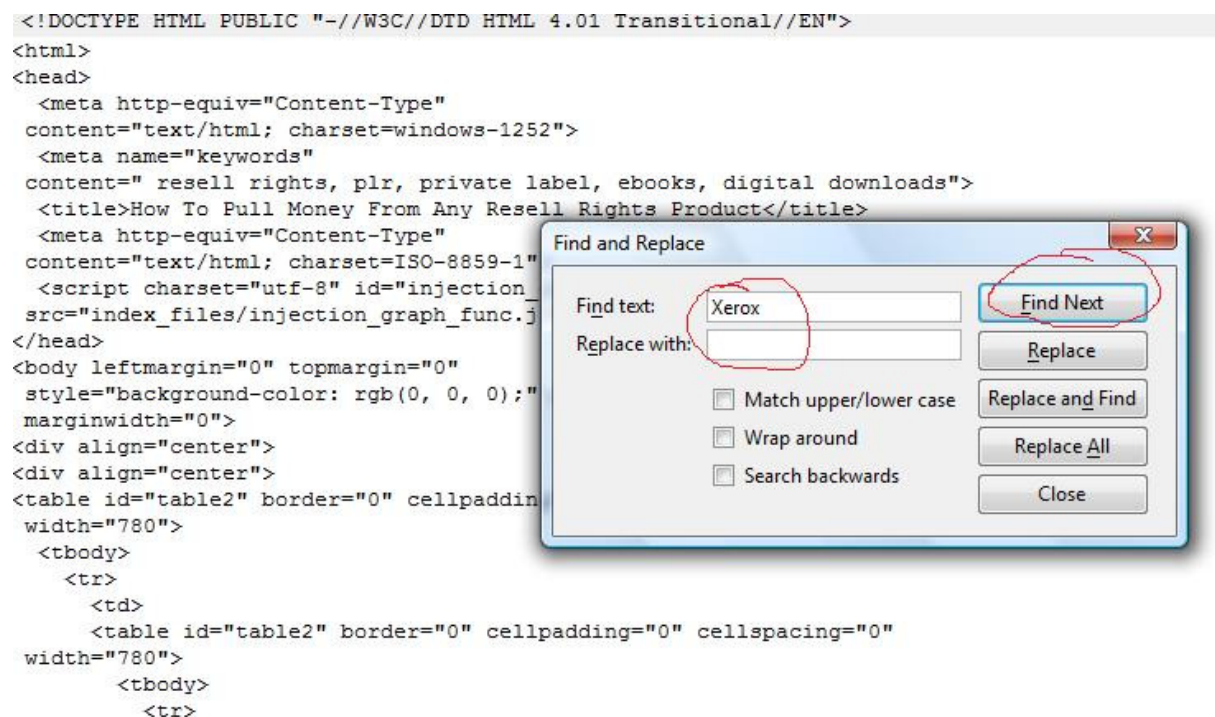

Xerox

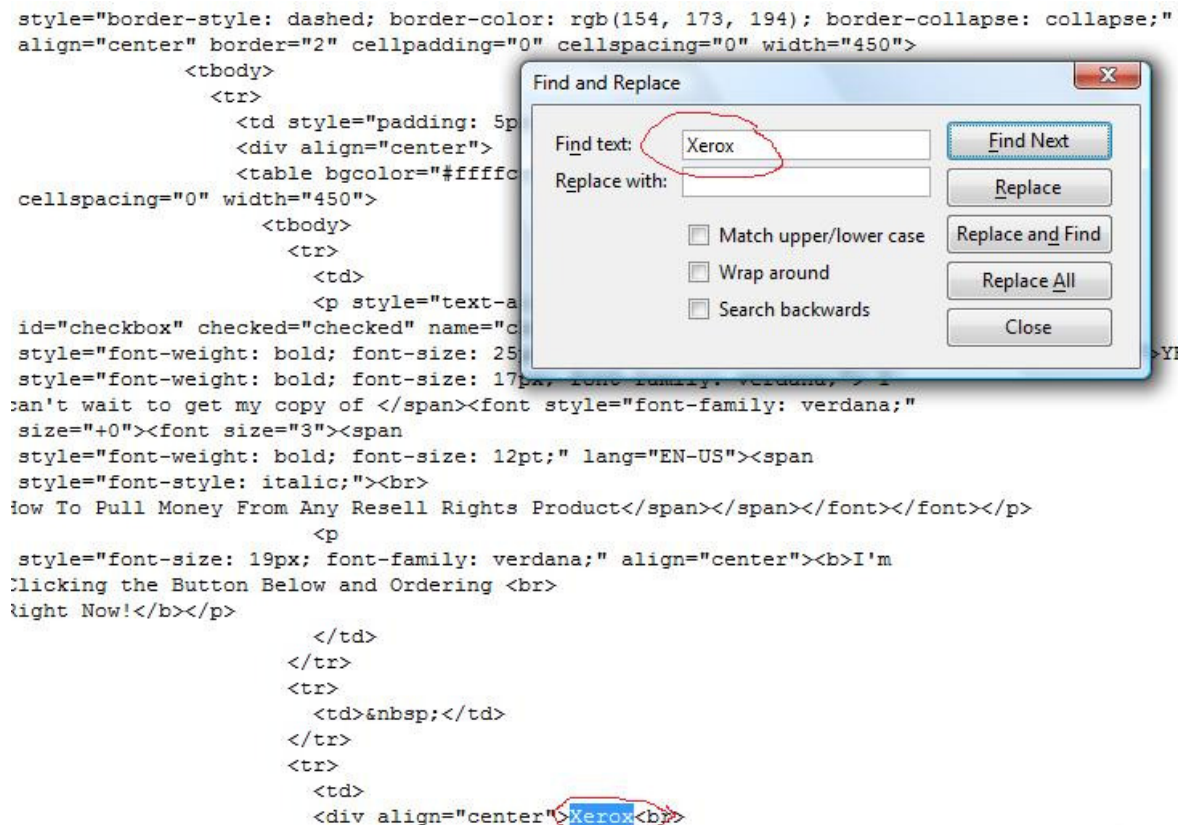

Then click on the <HTML> Source tab at the bottom left hand corner of the page, this allows you to view to HTML code.

Now we're going to find the word Xerox and paste our code in its place because we know that's the position we want our order button to be in and this is a much easier way rather than sifting through all of that code and guessing where to place it.

Click CTRL and F, this should open up a search box. Then type in the word Xerox.

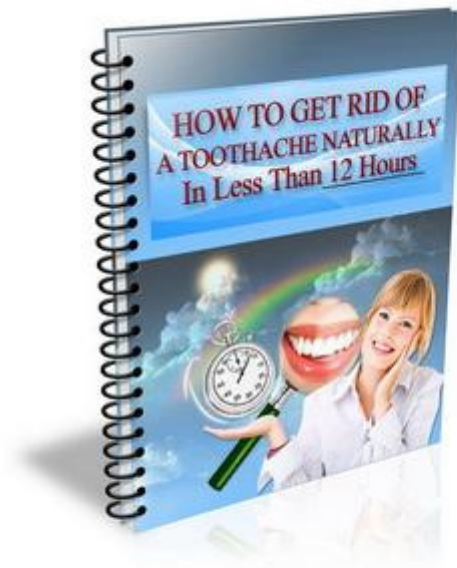

This will then take you to the word which should be highlighted.

Now press "Delete" then press CTRL V to paste your button code.

```
<a href="https://www.e-junkie.com/
```

Click the "Normal" tab on the bottom left hand side of the screen and then click "Save" and then "Browse" to view your button.

**Special
Price**

Save \$20.00
~~Not \$47~~

**Only
\$27**

And voila! you have your very own fully fledged order button linked to your uploaded product and ready to take orders.

This is great to start out with but with time you can eventually move into fancier order buttons by customizing them through Paypal but for the time being this is a great way to start.

You just need to re-upload your index.html (sales template) back up to the web so that your new order button will appear and will be activated.

Congratulations and wishing you the best success.
